CITY OF BEND

ORDINANCE NO. NS-2544

AN ORDINANCE OF THE CITY COUNCIL AMENDING THE BEND COMPREHENSIVE PLAN ADOPTING A 2025 STORMWATER PUBLIC FACILITY PLAN AS APPENDIX H REPEALING THE 2014 STORWMATER PUBLIC FACILITY PLAN, AND ADOPTING RELATED AMENDMENTS TO THE TEXT OF CHAPTER 8, PUBLIC FACILITIES AND SERVICES.

Recitals

A. In 2024, the City of Bend retained Otak to prepare an updated Stormwater Master Plan and Goal 11 Public Facility Plan for the City's stormwater infrastructure. The 2025 Stormwater Public Facility Plan (PFP) will replace the Stormwater Master Plan and Public Facility Plan adopted in 2014.

B. Between 2024 and 2025, the City worked with Otak and the Water Services Department's Water Advisory Group (WAG, formerly the Utilities Public Advisory Group), to review work products and provide feedback to the project team that informed development of a final 2025 Stormwater Master Plan. Members of the WAG and others who provided input on the Stormwater Master Plan and PFP included Bend Park and Recreation District (BPRD), Central Oregon Builders Association (COBA), the City of Redmond, local engineering firms, individuals with experience or expertise in areas that relate to the protection and management of water resources including landscape design and construction, property development and consulting engineers, members of the environmental community, other community members and representatives of neighborhood organizations, and the Bend Chamber of Commerce and representatives from Bend businesses and the City of Bend Environmental and Climate Committee.

C. The 2025 Goal 11 Stormwater Public Facility Plan was developed based on the work in the Stormwater Master Plan, the above-described other agencies and interested parties, and the City's policy goals for stormwater management and increasing urbanization.

D. On November 3, 2025, the City submitted a Notice of Proposed Amendment pursuant to ORS 197.610 to the Oregon Department of Land Conservation and Development (DLCD). This Notice proposed adoption of a 2025 Stormwater Public Facility Plan and amendments to the text of Chapter 8, Public Facilities and Services, related to Storm Drainage Facilities and Systems.

E. On December 8, 2025, the Bend Planning Commission conducted a public hearing on the 2025 Stormwater Public Facility Plan and the proposed amendments to the text of Chapter 8 of the Comprehensive Plan. At the close of this hearing held on December 8, 2025, the Planning Commission voted 7-0 to forward the proposed 2025 Stormwater Public Facility Plan and

amendments to Chapter 8 of the Comprehensive Plan to the City Council with a recommendation to approve.

F. On December 17, 2025, the Bend City Council held a public hearing on the 2025 Stormwater Public Facility Plan and the related amendments to the text of Chapter 8 of the Comprehensive Plan. Notice of this hearing before the City Council was published in the Bend Bulletin on November 16, 2025. The City Council has considered the evidence in the record, including the evidence and testimony submitted at the public hearings.

Based on these findings, THE CITY OF BEND ORDAINS AS FOLLOWS:

Section 1. The 2014 Stormwater Public Facility, adopted through Ordinance NS 2230 and incorporated as Appendix H of the Bend Comprehensive Plan, is repealed.

Section 2. The 2025 Stormwater Public Facility Plan, attached as Exhibit B, is adopted as Appendix H of the Bend Comprehensive Plan.

Section 3. Chapter 8 of the Bend Comprehensive Plan, Public Facilities and Services, is amended as shown in Exhibit C.

Section 4. In addition to the findings set forth above, the City Council adopts Exhibit A as their Findings.

Section 5. If any provision, section, phrase, or word of this ordinance or its application to any person or circumstance is held invalid, the invalidity does not affect other provisions that can be given effect without the invalid provision or application.

Section 6. All other provisions of the Bend Comprehensive Plan remain unchanged by this ordinance and remain in effect.

First Reading Date: December 17, 2025

Second Reading and adoption by roll call vote: January 7, 2026

YES: Kebler, Franzosa, Méndez, Norris, Perkins, Platt

NO:

Melanie Kebler, Mayor

Attest:

Ashley Bontje, City Recorder

Approved as to form:

Ian Leitheiser, City Attorney

k. Goal 13, Energy
l. Goal 14, Urbanization

II. PROCEDURAL FINDINGS:

1. **PLANNING COMMISSION REVIEW:** The City has initiated a process to adopt legislative amendments to the Bend Comprehensive Plan. The amendments include adoption of a 2025 Stormwater Public Facility Plan (PFP) and amendments to the text and policies of Chapter 8, Public Facilities and Services, of the Bend Comprehensive Plan. These are legislative amendments to the Comprehensive Plan because they involve broad policy decisions that will apply citywide, and not to one or a small group of properties (See BDC 4.6.200(A)). Before City Council considers such legislative amendments, the Planning Commission is charged with reviewing the amendments and making a recommendation to the City Council per BDC 4.1.500.

2. **PUBLIC NOTICE AND COMMENTS:** Staff provided the notice required under ORS 197.610 and OAR 660-0018 to the Department of Land Conservation and Development (DLCD) on November 3, 2025, 35 days prior to the first evidentiary hearing. Staff also provided public notice through the Bend Bulletin newspaper on November 16, 2025, as required by Bend Development Code 4.6.200 and 4.1.515. In addition, notice was sent directly to the Deschutes County Community Planning Division by electronic mail on November 17, 2025. The notice was also sent by electronic mail to the members of the Water Advisory Group (WAG) on November 17, 2025.
   As of the date of this report, no public comment letters have been received by the Planning Division. Should the Planning Commission recommend approval of the proposed PFP and amendments to the text of Chapter 8, any public comments will be noted in the Staff Report to the City Council.

3. **RECORD:** The documents in CityView for PLTEXT20250591 are made part of the record and are placed before the Planning Commission for consideration during the proceedings on the amendments. The documents are available for review and can be viewed in the Online Permit Center Portal at https://cityview.ci.bend.or.us/Portal/Planning/Locator on the City of Bend website by entering the project number PLTEXT20250591 in the search bar to find the project. The record includes, but is not limited to, the following documents:

   a. 2025 Stormwater Public Facility Plan

   b. 2025 Stormwater Master Plan (Draft)

   c. Technical Appendices to the 2026 Stormwater Master Plan (Draft)

4. **BACKGROUND:**

   1. The City of Bend (City) last adopted a Statewide Planning Goal 11 Public Facility Plan for the stormwater system in 2014 through Ordinance NS-2230. This 2014 Stormwater PFP was based on a Stormwater Master Plan prepared by the URS Corporation for the City of Bend in 2014. The 2014 Stormwater PFP was based on Bend's city boundaries and the urban growth boundary (UGB) as it existed in 2014.

   2. In 2016, the City adopted a set of significant amendments to the Bend Comprehensive Plan, including a UGB amendment that added 2,380 acres to the Bend UGB. Through Ordinance NS-2271, the City also adopted several new plan chapters and new appendices to support the adoption of the UGB amendment. Since 2016, the City has adopted several amendments to the Comprehensive Plan, including several special plan districts for master plans within the UGB (See BDC Chapter 2.7) and two additional amendments to the UGB for the Parkside Place Master Plan (2023) and the Stevens Road Tract (2024). In 2014, Bend's population was an estimated 78,280; in 2024, Bend's population is now an estimated 104,000.

3. Statewide Planning Goal 11, Public Facilities and Services, requires cities to develop and adopt public facility plans for their water, sewer/wastewater, transportation, and stormwater systems and infrastructure. The Goal 11 administrative rule at OAR 660-011 (See OAR 660-011-0010(1)) requires a public facility plan to include the following components:

    a. An inventory and general assessment of the condition of all the significant public facility systems which support the land uses designated in the acknowledged comprehensive plan;

    b. A list of the significant public facility projects which are to support the land uses designated in the acknowledged comprehensive plan. Public facility project descriptions or specifications of these projects as necessary;

    c. Rough cost estimates of each public facility project;

    d. A map or written description of each public facility project's general location or service area;

    e. Policy statement(s) or urban growth management agreement identifying the provider of each public facility system. If there is more than one provider with the authority to provide the system within the area covered by the public facility plan, then the provider of each project shall be designated;

    f. An estimate of when each facility project will be needed; and

    g. A discussion of the provider's existing funding mechanisms and the ability of these and possible new mechanisms to fund the development of each public facility project or system.

    In addition, OAR 660-011-0005(7)(c) defines “Storm Sewer” to include the following components:

    (c) Storm sewer:
    (A) Major drainageways (major trunk lines, streams, ditches, pump stations and retention basins);
    (B) Outfall locations.

4. In 2024, the City began work to develop an updated Stormwater Master Plan. In January of 2024, the City entered into a contract with Otak to develop the Stormwater Master Plan and a new Statewide Planning Goal 11 compliant Stormwater Public Facility Plan (PFP). An updated Stormwater Master Plan is intended to provide:

    a. Direction for the city’s stormwater utility system’s operation, maintenance and development including future capital needs.

    b. Long-term stormwater management strategies necessary to remain compliant with regulatory requirements.

c. A basis for potential rate structure changes and to serve the City's stormwater needs over the next 20 years.

Otak also developed the proposed Stormwater PFP, based on their work to develop the Stormwater Master Plan. The Master Plan will serve as the document informing project development and completion through the City's Capital Improvement Program (CIP). The PFP is a component of the City's Comprehensive Plan that demonstrates the City's stormwater facilities and infrastructure (aka storm drainage facilities and systems) can serve the land uses anticipated by the Bend Comprehensive Plan.

5. Chapter 8 of the Bend Comprehensive Plan, Public Facilities and Services, includes both background text and policies related to Stormwater, aka Storm Drainage Systems and Facilities. The proposed amendments to Chapter 8 include:
   a. Updating and amending the text of the Storm Drainage Systems and Facilities section.
   b. Amending either the text and/or renumbering the policies
   c. Deleting policies 8-31, 8-35, 8-37, 8-38, and 8-39
   d. Adding one new policy that addresses climate change and its effect on storm events.

   NOTE: A clean version of the proposed Chapter 8 amendments includes the final renumbering of policies.

   Regarding OAR 660-011-0010(1)(e), the City will continue to serve as the Stormwater utility provided for the Bend UGB. There are no special districts or private utility providers that provide stormwater services in Bend. However, private development provides on-site stormwater collection and management relying on methods and practices from the Central Oregon Stormwater Manual (COSM). Once constructed, property owners main these on-site stormwater facilities.

III. APPLICATION OF APPROVAL CRITERIA:

BDC Chapter 4.6, Land Use District Map and Text Amendments

BDC 4.6.200 Legislative Amendments

A. Applicability, Procedure and Authority. Legislative amendments generally involve broad public policy decisions that apply to other than an individual property owner. These include, without limitation, amendments to the text of the Comprehensive Plan and map, Development Code and changes in the Zoning Map not directed at a small number of properties. They are reviewed using the Type IV procedure in accordance with BDC Chapter 4.1, Development Review and Procedures, and shall conform to BDC 4.6.600, Transportation Planning Rule Compliance. A legislative amendment may be approved or denied.

FINDING: The recommended amendments to the text of the Bend Comprehensive Plan involve broad public policy rather than application to an individual property owner. Therefore, the Legislative Amendment Procedures of this section are the appropriate procedures for this review. As stated above, the proposed amendments include adoption of a 2025 Stormwater Public Facility Plan that will replace the 2014 Stormwater Public Facility Plan as Appendix H of the Bend Comprehensive Plan and amendments to the text and policies of Chapter 8, Public Facilities and Services, of the Comprehensive Plan.

B. Criteria for Legislative Amendments. The applicant shall submit a written narrative which explains how the approval criteria will be met. A recommendation or a decision to approve or to deny an application for a legislative amendment shall be based on all of the following criteria:

1. The request is consistent with the applicable State land use law;

FINDING: The proposal meets this criterion because the proposed amendments are consistent with the applicable State land use law. In particular, they satisfy Goal 11, Public Facilities and Services. The findings below address the statewide planning goals the City finds are applicable to review of this proposal.

Goal 1, Citizen Involvement

To develop a citizen involvement program that insures the opportunity for citizens to be involved in all phases of the planning process.

FINDING: The proposed amendments will meet Goal 1 because the City has used its citizen involvement program to ensure citizens have an opportunity to review and comment on the PFP and the proposed changes to Chapter 8 of the Comprehensive Plan[1]. For the 2025 Stormwater PFP and amendments to Chapter 8 of the Comprehensive Plan, the City will hold at least two public hearings on this proposal, one before the Planning Commission and one before the City Council, consistent with the City's acknowledged procedures for legislative amendments in Section 4.6.200 of the Development Code. Those hearings provide an opportunity for community members to be involved in the adoption of the 2025 Stormwater PFP and amendments to Chapter 8 of the Comprehensive Plan. In addition, City staff described the public engagement efforts used for development of the Stormwater Master Plan during the November 10th work session before the Bend Planning Commission. The public engagement efforts included coordination with the Utilities Public Advisory Group, which was later renamed to the Water Advisory Group, Central Oregon Builders Association, and local architecture and engineering firms.

[1] See Citizen Involvement Program: https://www.bendoregon.gov/home/showdocument?id=33917.

Goal 2, Land Use Planning

To establish a land use planning process and policy framework as a basis for all decisions and actions related to use of land and to assure an adequate factual base for such decisions and actions.

FINDING: The 2025 Stormwater PFP meets this goal because it has been developed with and supported by an adequate factual base. The Stormwater PFP was developed using the 2025 Stormwater Master Plan prepared by Otak. These documents are included in the City Record for this work effort (See Procedural Findings (II)(3)). The Stormwater Master Plan itself was developed using a series of technical memoranda that are now included as Appendices A through G to the Master Plan and listed below:

1. Appendix A Memoranda, Reports, and Studies
2. Appendix B CIP Fact Sheets and Stormwater Planning Tool Kit
3. Appendix C Programmatic CIP Fact Sheets
4. Appendix D Policy Papers and Presentations
5. Appendix E Project Prioritization Materials
6. Appendix F Public Involvement Materials
7. Appendix G Preliminary Financial Analysis

These documents provide a factual base for the amendments to Chapter 8 and support the elements included in the PFP, as required under Division 11, specifically OAR 660-011-0010.

The 2025 Stormwater PFP also meets this goal because the City has coordinated review of the PFP with affected governmental units. This staff report includes findings that address OAR 660-011-0015(2), regarding coordination with other public agencies and affected governments in plan preparation. The City relied on the Water Advisory Group (WAG) to coordinate with the Bend LaPine School District, Bend Park District, Oregon Department of Environmental Quality (DEQ), and Oregon Water Resources Department (DEQ).

As indicated above under Procedural Findings (II)(2), the City notified the Deschutes County Planning Division directly of the proposed Stormwater PFP and amendments to Comprehensive Plan Chapter 8. In addition, the City notified the members of the WAG directly by electronic email of the both the Planning Commission and City Council hearings, and the WAG includes members from the following organizations:

- Oregon State University (OSU) Extension Services
- Oregon Water Resources Department
- Bend LaPine School District
- Bend Parks and Recreation District
- Oregon Department of Environmental Quality
- Deschutes County

Goal 3, Agricultural Lands

To preserve and maintain agricultural lands.

Goal 4, Forest Lands

To conserve forest lands by maintaining the forest land base and to protect the state's forest economy by making possible economically efficient forest practices that assure the continuous growing and harvesting of forest tree species as the leading use on forest land consistent with sound management of soil, air, water, and fish and wildlife resources and to provide for recreational opportunities and agriculture.

FINDING: There are no designated agricultural or forest lands within the project area. Therefore, Goals 3 and 4 do not apply.

Goal 5, Natural Resources, Scenic and Historic Areas, and Open Spaces

To protect natural resources and conserve scenic and historic areas and open spaces.

FINDING: The proposal is consistent with Goal 5 because the Stormwater PFP and amendments to Comprehensive Plan Chapter 8 will inform and support consideration of future changes to the Bend Development code regarding stormwater management. One of the purposes for regulating the collection and treatment of stormwater is to protect riparian areas from untreated stormwater. In Bend, this includes the Deschutes River and Tumalo Creek. The Stormwater PFP includes a capital improvement program that identifies projects that will either replace or upgrade certain outfalls to the Deschutes River.

Goal 6, Air, Water and Land Resources Quality

To maintain and improve the quality of the air, water and land resources of the state.

FINDING: The proposal is consistent with Goal 6 because the Stormwater PFP includes projects intended to protect water quality from untreated stormwater runoff. Section 5 of the Stormwater PFP includes both short- and long-term projects for improving the City's stormwater infrastructure and establishing programs for ongoing maintenance and replacement of older infrastructure.

Goal 7, Areas Subject to Natural Hazards

To protect people and property from natural hazards.

FINDING: The proposal is consistent with Goal 7 because the Stormwater PFP identifies projects, programs, and capital improvements intended to reduce the risk of flooding from stormwater. Section 5 of the PFP includes the short- and long-term projects, including for example projects on Franklin and Greenwood Avenues intended to better manage and control stormwater to prevent flooding.

Goal 8, Recreational Needs

To satisfy the recreational needs of citizens of the state and visitors and, where appropriate, to provide for the siting of necessary recreational facilities including destination resorts..

FINDING: This goal is not applicable to review of the proposal because neither the Stormwater PFP nor the proposed amendments to Chapter 8 directly impact the provision of public parks or Goal 8 destination resorts.

Goal 9, Economic Development

To provide adequate opportunities throughout the state for a variety of economic activities vital to the health, welfare, and prosperity of Oregon's citizens.

FINDING: The proposal is consistent with Goal 9 because the proposed improvements and programs for stormwater control will support ongoing economic activities in Bend. The record includes a copy of the 2025 Stormwater Master Plan and its Appendices. Appendix D includes a policy white paper "Drainage and Density: Stormwater Management" that provides options, specifications, and costs for a variety of stormwater management methods and tools that can support new economic development. Appendix B includes a Stormwater Toolkit that provides a variety of methods, specifications, and estimated costs for stormwater management.

Goal 10, Housing

To provide for the housing needs of the citizens of the state.

FINDING: The proposal is consistent with Goal 10 because the proposed improvements and programs in the Stormwater PFP along with the proposed Stormwater Toolkit (See Appendix D to the Stormwater Master Plan) will support the development of needed housing for all residents of the state. Appendix D provides options, specifications, and costs for a variety of stormwater management tools that can support new housing development. In addition, Appendix B to the Stormwater Master Plan includes the Stormwater Toolkit (See above finding) that outlines options, specifications, and estimates costs for a variety of methods of stormwater management and treatment, including regional facilities. The toolkit provides housing developers with a number of options for managing stormwater based on the size and scale of their development.

Goal 11, Public Facilities and Services

To plan and develop a timely, orderly and efficient arrangement of public facilities and services to serve as a framework for urban and rural development.

FINDING: The following findings address Oregon Administrative Rules (OAR) 660-011 regarding the required components for a Goal 11 public facility plan. Compliance with the applicable sections of OAR 660-011 demonstrates compliance with Goal 11. These findings focus on the proposed 2025 Stormwater PFP.

OAR 660-011-0000 - Purpose

The purpose of this division is to aid in achieving the requirements of Goal 11, Public Facilities and Services, OAR 660-015-0000(11), interpret Goal 11 requirements regarding public facilities and services on rural lands, and implement ORS 197.712(2)(e), which requires that a city or county shall develop and adopt a public facility plan for areas within an urban growth boundary containing a population greater than 2,500 persons. The purpose of the plan is to help assure that urban development in such urban growth boundaries is guided and supported by types and levels of urban facilities and services appropriate for the needs and requirements of the urban areas to be serviced, and that those facilities and services are provided in a timely, orderly and efficient arrangement, as required by Goal 11. The division contains definitions relating to a public facility plan, procedures and standards for developing, adopting, and amending such a plan, the date for submittal of the plan to the Commission and standards for Department review of the plan.

FINDING: The requirements of OAR 660-011 are applicable to the development and review of this 2025 Stormwater Public Facility Plan (PFP) because the City has a population of greater than 2,500 persons within its UGB. The following findings show the City has developed the 2025 Stormwater PFP to ensure that future urban development is guided and supported by types and levels of stormwater management and treatment facilities and systems within the Bend UGB.

660-011-0010 - The Public Facility Plan

(1) The public facility plan shall contain the following items:

(a) An inventory and general assessment of the condition of all the significant public facility systems which support the land uses designated in the acknowledged comprehensive plan;

FINDING: The 2025 Stormwater PFP satisfies this criterion because it includes an updated inventory and general assessment of the condition of the City's stormwater containment facilities and systems. The 2025 Stormwater PFP includes the inventory and general assessment required by (a) in Section 3, Storm Sewer Inventory and General Assessment.

Figures 2 (drywells) and 3 (drillholes) display the inventory of underground injection controls (UICs) in Bend. Figure 4 shows the locations and geographies for outfall basins.

With respect to the general assessment of condition required by (a), the Stormwater PFP includes several tables in Section 3. Tables 1 through 31 of the 2025 PFP include the general assessment for the significant stormwater facilities in Bend. For each significant facility, Otak used a rating system of good, fair, or poor to rate their condition.

(b) A list of the significant public facility projects which are to support the land uses designated in the acknowledged comprehensive plan. Public facility project descriptions or specifications of these projects as necessary;

FINDING: The 2025 Stormwater PFP meets this criterion because it includes lists of both short-term and long-term projects in Section 5 needed to support land uses in the acknowledged Bend Comprehensive Plan. Table 32 outlines the short-term projects needed within the next 1 to 5 years. Table 33 outlines the long-term projects needed in the next 6 to 20 years. Section 4 of the PFP and Appendix B of the PFP describes the methods employed to prioritize projects and when they would be needed.

(c) Rough cost estimates of each public facility project;

FINDING: The 2025 Stormwater PFP meets this criterion because it includes rough cost estimates for each public facility project. Section 6 of the PFP outlines how costs were estimated for the public facility projects referred to in the forgoing finding. Tables 32 and 33 provide Class V planning-level cost estimates for each of the public facilities projects in 2025 dollars, not accounting for future inflation. For the purpose of addressing this rule, Staff finds that Class V planning level cost estimates are “Rough cost estimates” under OAR 660-011-0005(2).

(d) A map or written description of each public facility project's general location or service area;

FINDING: The 2025 Stormwater PFP meets this criterion because it includes a written description of each project’s general location and service area. Tables 32 and 33 (See Section 5) list and describe the short-term and long-term projects in the Stormwater PFP. Each project listed has a general description of its location in the project description. Several projects identify the road right of way in which a project will be completed.

(e) Policy statement(s) or urban growth management agreement identifying the provider of each public facility system. If there is more than one provider with the authority to provide the system within the area covered by the public facility plan, then the provider of each project shall be designated;

FINDING: The City has already addressed this criterion with the adoption of the 2014 Stormwater PFP. With the adoption of Ordinance 2230 in 2014, the City adopted amendments to Chapter 8 of the Comprehensive Plan. These amendments included the

adoption of Policies 19 through 39 (now listed as policies 8-22 through 8-42). Policy 8-22 identifies the City of Bend as the stormwater utility for the Bend urban growth boundary.

(f) An estimate of when each facility project will be needed; and

FINDING: The 2025 Stormwater PFP meets this criterion because it includes, where available, estimates of when each facility project will be needed. Section 5 of the PFP includes Table 32, which lists the short-term for the Stormwater PFP. This table includes a column "Approximate Year of Implementation" that indicates when a project will be implemented. Table 33 lists the long-term projects that will be needed in the next 6 to 20 years of the PFP. The timing for initiating a long-term project is dependent on the availability of funding.

(g) A discussion of the provider's existing funding mechanisms and the ability of these and possible new mechanisms to fund the development of each public facility project or system.

FINDING: The 2025 Stormwater PFP meets this criterion because it includes a discussion of the City's existing funding mechanisms and the ability of these to fund the development of the needed projects. As addressed in a prior finding, the City of Bend serves as the stormwater utility for the City (See Policy 8-22). Section 6 of the PFP discusses project costs and funding mechanisms for these projects through the Stormwater Utility fee. As of July 1, 2025, the stormwater utility fee is $8.16 per equivalent residential unit (ERU). The City's stormwater utility is funded by this service charge and occasional grant funds for special projects. As an enterprise fund, the service charge funding can only be spent to address stormwater management. Table 34 presents the Stormwater Fund budget for the 2025-2027 biennium.

(2) Those public facilities to be addressed in the plan shall include, but need not be limited to those specified in OAR 660-011-0005(5). Facilities included in the public facility plan other than those included in OAR 660-011-0005(5) will not be reviewed for compliance with this rule.

(3) It is not the purpose of this division to cause duplication of or to supplant existing applicable facility plans and programs. Where all or part of an acknowledged comprehensive plan, facility master plan either of the local jurisdiction or appropriate special district, capital improvement program, regional functional plan, similar plan or any combination of such plans meets all or some of the requirements of this division, those plans, or programs may be incorporated by reference into the public facility plan required by this division. Only those referenced portions of such documents shall be considered to be a part of the public facility plan and shall be subject to the administrative procedures of this division and ORS Chapter 197.

FINDING: This finding addresses (2) and (3) above. The 2025 Stormwater PFP focuses on the infrastructure for containing and treating stormwater intended to serve the Bend UGB. OAR 660-011-0005(1) defines a public facility plan as a support document or

documents to a comprehensive plan. The 2025 Stormwater PFP addressed here describes the stormwater facilities, including, but not limited to, outfalls, underground injection controls, and best practices to contain stormwater and prevent flooding, with the goal that this infrastructure supports the land uses designated under the Bend Comprehensive Plan. OAR 660-011-0005(5) requires that the stormwater systems (categorized as storm sewer under OAR 660-011-0005(7)(c)) be included within a public facility plan. The PFP is based upon the 2025 Stormwater Master Plan and its technical appendices. The 2025 Stormwater PFP references those facilities intended to serve the Bend UGB.

660-011-0015 - Responsibility for Public Facility Plan Preparation

(1) Responsibility for the preparation, adoption and amendment of the public facility plan shall be specified within the urban growth management agreement. If the urban growth management agreement does not make provision for this responsibility, the agreement shall be amended to do so prior to the preparation of the public facility plan. In the case where an unincorporated area exists within the Portland Metropolitan Urban Growth Boundary which is not contained within the boundary of an approved urban planning area agreement with the County, the County shall be the responsible agency for preparation of the facility plan for that unincorporated area. The urban growth management agreement shall be submitted with the public facility plan as specified in OAR 660-011-0040.

FINDING: Pursuant to Section 3.3(d) of the Revised Joint Management Agreement Regarding the Area within the Bend Urban Growth Boundary, the City retains the authority to prepare and adopt public facility plans and amendments for utilities within the UGB and the Urbanizable Area (UA) Further, the 2025 Stormwater PFP specifies the City as the stormwater utility in the Bend UGB.

(2) The jurisdiction responsible for the preparation of the public facility plan shall provide for the coordination of such preparation with the city, county, special districts and, as necessary, state and federal agencies and private providers of public facilities. The Metropolitan Service District is responsible for public facility plans coordination within the District consistent with ORS 197.190 and 268.390.

FINDING: The proposed PFP meets this criterion because the City has coordinated with affected governmental units. The City coordinated with the affected units through the Utility Public Advisory Group (UPAG) that was later renamed the Water Advisory Group (WAG), and includes members from the following organizations:

- Oregon State University (OSU) Extension Services
- Oregon Water Resources Department
- Bend LaPine School District
- Bend Parks and Recreation District
- Oregon Department of Environmental Quality
- Deschutes County

(3) Special districts, including port districts, shall assist in the development of the public facility plan for those facilities they provide. Special districts may object to that portion of the facilities plan adopted as part of the comprehensive plan during review by the Commission only if they have completed a special district agreement as specified under ORS 197.185 and 197.254(3) and (4) and participated in the development of such portion of the public facility plan.

FINDING: This rule is not applicable because there are no water control districts organized under ORS Chapter 553 that provide stormwater control services to areas within the Bend UGB.

(4) Those state agencies providing funding for or making expenditures on public facility systems shall participate in the development of the public facility plan in accordance with their state agency coordination agreement under ORS 197.180 and 197.712(2)(f).

FINDING: This rule is not applicable because no state agencies provide funding for or are making expenditures on the stormwater facilities and systems that are the subject of this plan. Section 6 of the Stormwater PFP shows that the City's stormwater utility is funded through a stormwater utility fee. Grants are obtained for special projects.

660-011-0020 - Public Facility Inventory and Determination of Future Facility Projects

(1) The public facility plan shall include an inventory of significant public facility systems. Where the acknowledged comprehensive plan, background document or one or more of the plans or programs listed in OAR 660-011-0010(3) contains such an inventory, that inventory may be incorporated by reference. The inventory shall include:
(a) Mapped location of the facility or service area;
(b) Facility capacity or size; and
(c) General assessment of condition of the facility (e.g., very good, good, fair, poor, very poor).

FINDING: The 2025 Stormwater PFP meets this criterion because it includes several tables that present an inventory of the significant stormwater facilities in the Bend UGB. These tables include an inventory of facilities, their size, and a general assessment of condition of the facility. This information is included in Section 3 of the PFP, which includes the following figures and tables:

- Figure 2 – UICs – Drywells
- Figure 3 – UICs – Drillholes
- Figure 4 – Stormwater Outfall Basins
- Tables 1 through 31 include the specific data on the outfall stormwater infrastructure. Each table refers to a location of one or a series of and includes the facility size, and a general assessment of the facility.

(2) The public facility plan shall identify significant public facility projects which are to support the land uses designated in the acknowledged comprehensive plan. The public facility plan shall list the title of the project and describe each public facility project in terms of the type of facility, service area, and facility capacity.

FINDING: The 2025 Stormwater PFP meets this criterion because it includes several tables and a section that discusses the significant public facility projects that are planned to support the land uses designated in the acknowledged Comprehensive Plan. Section 4 of the PFP includes background information on the planning for stormwater improvements to support planned growth within the Bend UGB. Section 5 of the PFP includes both the short-term and long-term stormwater projects. Table 32 of the PFP lists the projects needed in the short term (1-5 years), along each project's rough cost estimates and year when the project will be needed. Table 33 presents the long-term projects needed over the next 6 to 20 years.

(3) Project descriptions within the facility plan may require modifications based on subsequent environmental impact studies, design studies, facility master plans, capital improvement programs, or site availability. The public facility plan should anticipate these changes as specified in OAR 660-011-0045.

FINDING: This rule is not a criterion for approval for the 2025 Stormwater PFP. This report addresses OAR 660-011-045 in a subsequent finding.

660-011-0025 - Timing of Required Public Facilities

(1) The public facilities plan shall include a general estimate of the timing for the planned public facility projects. This timing component of the public facilities plan can be met in several ways depending on whether the project is anticipated in the short term or long term. The timing of projects may be related directly to population growth, e.g., the expansion or new construction of water treatment facilities. Other facility projects can be related to a measure of the facility's service level being met or exceeded, e.g., a major arterial or intersection reaching a maximum vehicle-per-day standard. Development of other projects may be more long term and tied neither to specific population levels nor measures of service levels, e.g., sewer projects to correct infiltration and inflow problems. These projects can take place over a long period of time and may be tied to the availability of long-term funding. The timing of projects may also be tied to specific years.

(2) Given the different methods used to estimate the timing of public facilities, the public facility plan shall identify projects as occurring in either the short term or long term, based on those factors which are related to project development. For those projects designated for development in the short term, the public facility plan shall identify an approximate year for development. For those projects designated for development over the long term, the public facility plan shall provide a general estimate as to when the need for project development would exist, e.g., population level, service level standards, etc. Timing provisions for public facility projects shall be consistent with the acknowledged comprehensive plan's projected growth

estimates. The public facility plan shall consider the relationships between facilities in providing for development.

(3) Anticipated timing provisions for public facilities are not considered land use decisions as specified in ORS 197.712(2)(e), and, therefore, cannot be the basis of appeal under ORS 197.610(1) and (2) or 197.835(4).

FINDING: This finding addresses OAR 660-011-0025(1) through (3). The 2025 Stormwater PFP meets (1) through (3) above because it includes a general estimate of timing for all capital improvement projects presented in Tables 32 and 33. Table 32 presents the projects needed in the short term (1 to 5 years) and includes a year when each project will be needed (See column "Approximate Year of Implementation"). Table 33 presents the projects needed in the long term (6 to 20 years). Projects in Table 33 will be prioritized and constructed as funding becomes available.

660-011-0030 - Location of Public Facility Projects

(1) The public facility plan shall identify the general location of the public facility project in specificity appropriate for the facility. Locations of projects anticipated to be carried out in the short term can be specified more precisely than the locations of projects anticipated for development in the long term.

FINDING: The 2025 Stormwater PFP meets this criterion because it includes sufficient information to identify the general location of projects in Tables 32 and 33. The projects in Table 32 (short term) include a general location of the street in which new or replacement facilities will be located (e.g. Galveston, Greenwood, or Franklin). Several other projects are programs that are not limited to a specific location but intended to provide stormwater management around the city. Table 33 presents the long-term projects. Twelve (12) of these long-term projects describe the location of the project in both the Project Name and its Description. Three (3) of these long-term projects are also programs for stormwater management that will be applied citywide.

(2) Anticipated locations for public facilities may require modifications based on subsequent environmental impact studies, design studies, facility master plans, capital improvement programs, or land availability. The public facility plan should anticipate those changes as specified in OAR 660-011-0045.

FINDING: The 2025 Stormwater PFP relies on the 2025 Stormwater Master Plan and its Technical Appendices. The master plan, and therefore the PFP, acknowledges that additional design work and studies will be required before the City develops a final design and location for specific facilities.

660-011-0035 - Determination of Rough Cost Estimates for Public Facility Projects and Local Review of Funding Mechanisms for Public Facility Systems

(1) The public facility plan shall include rough cost estimates for those sewer, water, and transportation public facility projects identified in the facility plan. The intent of these rough cost estimates is to:

(a) Provide an estimate of the fiscal requirements to support the land use designations in the acknowledged comprehensive plan; and
(b) For use by the facility provider in reviewing the provider's existing funding mechanisms (e.g., general funds, general obligation and revenue bonds, local improvement district, system development charges, etc.) and possible alternative funding mechanisms. In addition to including rough cost estimates for each project, the facility plan shall include a discussion of the provider's existing funding mechanisms and the ability of these and possible new mechanisms to fund the development of each public facility project or system. These funding mechanisms may also be described in terms of general guidelines or local policies.

FINDING: The proposal meets this criterion because the 2025 Stormwater PFP includes rough cost estimates for the stormwater infrastructure projects identified in the plan. For the projects presented in Tables 32 and 32, the Stormwater PFP provides planning level cost estimates, consistent with OAR 660-011-0005(2).

(2) Anticipated financing provisions are not considered land use decisions as specified in ORS 197.712(2)(e) and, therefore, cannot be the basis of appeal under ORS 197.610(1) and (2) or 197.835(4).

FINDING: This rule is not an approval criterion for the proposal.

660-011-0040 - Date of Submittal of Public Facility Plans

The public facility plan shall be completed, adopted, and submitted by the time of the responsible jurisdiction's periodic review. The public facility plan shall be reviewed under OAR Chapter 660, Division 25, "Periodic Review" with the jurisdiction's comprehensive plan and land use regulations. Portions of public facility plans adopted as part of comprehensive plans prior to the responsible jurisdiction's periodic review will be reviewed pursuant to OAR Chapter 660, Division 18, "Post Acknowledgment Procedures".

FINDING: The proposed 2025 Stormwater PFP will be reviewed and adopted as a post-acknowledgement plan amendment. This amendment will include adoption of the 2025 Stormwater PFP as Appendix H, replacing the 2014 Stormwater PFP, and related amendments to Chapter 8 of the Bend Comprehensive Plan, Public Facilities and Services, to recognize and incorporate the plan as the PFP for stormwater public facilities and infrastructure in the Bend UGB.

660-011-0045 - Adoption and Amendment Procedures for Public Facility Plans

(1) The governing body of the city or county responsible for development of the public facility plan shall adopt the plan as a supporting document to the jurisdiction's comprehensive plan and shall also adopt as part of the comprehensive plan:

(a). The list of public facility project titles, excluding (if the jurisdiction so chooses) the descriptions or specifications of those projects;

(b). A map or written description of the public facility projects' locations or service areas as specified in sections (2) and (3) of this rule; and

(c) The policy(ies) or urban growth management agreement designating the provider of each public facility system. If there is more than one provider with the authority to provide the system within the area covered by the public facility plan, then the provider of each project shall be designated.

FINDING: This finding addresses (1)(a) through (1)(c) above. The proposal includes adoption of the 2025 Stormwater PFP as a supporting document to the Bend Comprehensive Plan. This proposal also includes adoption of related and conforming amendments to Chapter 8 of the Bend Comprehensive Plan, Public Facilities and Services, to include updated information and amendments to existing stormwater policies based on the 2025 Stormwater PFP. The proposed Stormwater PFP includes the lists of public facility projects in Tables 32 and 33. These tables also provide a general location for each project within City's rights of way or as a stormwater management program. Finally, the Stormwater PFP refers to existing policy statements in Chapter 8 of the Bend Comprehensive Plan that identify the City as the stormwater utility for the Bend UGB. These criteria have been satisfied.

(2) Certain public facility project descriptions, location or service area designations will necessarily change as a result of subsequent design studies, capital improvement programs, environmental impact studies, and changes in potential sources of funding. It is not the intent of this division to:

(a) Either prohibit projects not included in the public facility plans for which unanticipated funding has been obtained;
(b) Preclude project specification and location decisions made according to the National Environmental Policy Act; or
(c) Subject administrative and technical changes to the facility plan to ORS 197.610(1) and (2) or 197.835(4).

FINDING: This rule is not an approval criterion. The City understands that certain elements of projects listed in the 2025 Stormwater PFP may change, and that such changes are not subject to ORS 197.610(1) or (2) or 197.835(4).

(3) The public facility plan may allow for the following modifications to projects without amendment to the public facility plan:

(a) Administrative changes are those modifications to a public facility project which are minor in nature and do not significantly impact the project's general description, location, sizing, capacity, or other general characteristic of the project;

(b) Technical and environmental changes are those modifications to a public facility project which are made pursuant to "final engineering" on a project or those that result from the findings of an Environmental Assessment or Environmental Impact Statement conducted under regulations implementing the procedural provisions of the National Environmental Policy Act of 1969 (40 CFR Parts 1500-1508)or any federal or State of Oregon agency project development regulations consistent with that Act and its regulations.

(c) Public facility project changes made pursuant to subsection (3)(b) of this rule are subject to the administrative procedures and review and appeal provisions of the regulations controlling the study (40 CFR Parts 1500-1508 or similar regulations) and are not subject to the administrative procedures or review or appeal provisions of ORS Chapter 197, or OAR Chapter 660 Division 18.

FINDING: This rule is not an approval criterion. The City understands that certain elements of projects listed in the 2025 Stormwater PFP may change. This rule defines what changes are not subject to ORS Chapter 197 or OAR Chapter 660 Division 18.

4) Land use amendments are those modifications or amendments to the list, location or provider of, public facility projects, which significantly impact a public facility project identified in the comprehensive plan and which do not qualify under subsection (3)(a) or (b) of this rule. Amendments made pursuant to this subsection are subject to the administrative procedures and review and appeal provisions accorded "land use decisions" in ORS Chapter 197 and those set forth in OAR Chapter 660 Division 18.

FINDING: This rule is not an approval criterion. The City acknowledges that the City Council's adoption of this 2025 Stormwater PFP and related amendments to the text of Chapter 8 is subject to the review and appeal procedures accorded "land use decisions" in ORS Chapter 197 and those set forth in OAR Chapter 660 Division 18. As indicated above, the City will submit this proposal to the Department of Land Conservation and Development as a post-acknowledgement plan amendment under OAR 660-018.

Based on the foregoing, Staff finds that the proposed 2025 Stormwater PFP satisfies Goal 11 and its implementing administrative rule OAR 660-011.

Goal 12, Transportation

To provide and encourage a safe, convenient and economic transportation system.

FINDING: Goal 12 is not applicable to this proposal because the City does not propose any changes to the acknowledged transportation system plan. The proposal includes amendments to policies in Chapter 8 of the Comprehensive Plan and a 2025 Stormwater Public Facility Plan that includes several projects that will construct improvements to stormwater infrastructure in public rights-of-way, but does not include any concurrent amendments to the TSP. In addition, the proposal does not include any changes in land use that would require evaluation against OAR 660-012-0060.

Goal 13, Energy Conservation

Land and uses developed on the land shall be managed and controlled so as to maximize the conservation of all forms of energy, based upon sound economic principles.

FINDING: Goal 13 is not applicable because the proposed 2025 Stormwater PFP and amendments to Chapter 8 of the Comprehensive Plan do not include or propose further changes in land uses. The proposed projects in the Stormwater PFP include projects to improve or construct new stormwater facilities in the City rights-of-way, and the proposal does not include any concurrent changes to either the Comprehensive Plan map or the Zoning map.

Goal 14, Urbanization

To provide for an orderly and efficient transition from rural to urban land use, to accommodate urban population and urban employment inside urban growth boundaries, to ensure efficient use of land, and to provide for livable communities.

FINDING: The proposal is consistent with Goal 14 because the 2025 Stormwater PFP includes projects in the short term and the long term that will support an orderly and efficient urbanization of the land within the Bend urban growth boundary. The projects presented in Tables 32 and 33 of the Stormwater PFP will support the efficient use of land for housing and employment through managing stormwater, including in the public rights-of-way.

Goal 15, Willamette River Greenway

Goal 16, Estuarine Resources

Goal 17, Coastal Shorelands

Goal 18, Beaches and Dunes

Goal 19, Ocean Resources

FINDING: Goals 15 through 19 are not applicable to the proposed amendments because the City of Bend does not include any of the noted features protected through Goals 16 through 19, is not location along the Oregon Coast, and does not abut the Willamette River.

Staff finds the proposal satisfies BDC 4.6.200(B)(1).

2. The request is consistent with the applicable Bend Comprehensive Plan goals and policies;

FINDING: The "goals" established in the Comprehensive Plan express the desires of the residents of Bend as the City progresses into the future. The "goals" are generally carried out through "policies," which are statements of public policy. The following Policies are applicable to review of the proposal:

Preface

Future Plan Updates

***

Changes proposed by individuals or other agencies. A proposal by an individual, corporation, or public agency to change to the Plan text, land use map, other exhibits, or policies shall be considered as determined by the procedures ordinance. A person or agency proposing a change has the burden to demonstrate a public need and benefit for the change.

FINDING: The proposed Stormwater PFP and amendments to Comprehensive Plan Chapter 8 satisfy a public need and show a benefit for the proposed changes. The public need in this case is the need for an updated Stormwater Public Facility Plan. The current Stormwater PFP was developed and adopted in 2014. Since that time, the City completed a significant Comprehensive Plan update, including a UGB expansion of 2,380 acres. Two additional areas have been added to the UGB, the Parkside Place Master Plan and the Stevens Road Tract, and several master plans have been approved for development in other expansion areas and in areas already within the UGB. The public benefits for these proposed changes include the implementation of the projects identified in the 2025 Stormwater PFP and updated policies for storm drainage facilities and systems in Chapter 8 of the Bend Comprehensive Plan.

Chapter 5, Housing

5-48 All residential areas will be provided with community water and sewer services and other facilities necessary for safe, healthful, convenient urban living consistent with the density of development.

FINDING: The proposal is consistent with Policy 5-48 because the Stormwater PFP includes short- and long-term projects (See PFP Tables 32 and 33) that will provide for safe, healthful, convenient urban living, consistent with the density of development

contemplated under the Comprehensive Plan. The projects proposed by the 2025 Stormwater PFP are intended to manage stormwater through facilities in the City's rights of way or through programs for stormwater management and treatment. In addition, the proposed amendments to the text and policies of Chapter 8 of the Comprehensive Plan are consistent with this policy because they further ensure that updated methods and practices for stormwater management will ensure residential areas will be safe, healthful, and provide convenient urban living.

Chapter 6, Economy

6-3 Investment in transportation, water, sewer, fiber, and other utility infrastructure should be prioritized to serve economic lands.

6-4 Infrastructure will be planned, designed, and constructed to support continued economic growth and orderly development.

FINDING: This finding addresses policies 6-3 and 6-4. The proposal is consistent with Policy 6-3 because the proposed stormwater infrastructure projects will serve economic lands. The 2025 Stormwater PFP includes projects in Tables 32 and 33 that will serve lands in the Bend UGB needed for both housing and employment/economic development. The proposal is also consistent with Policy 6-4 because the projects in the 2025 Stormwater PFP have been planned, will be designed, and constructed to support continued economic growth and orderly development by ensuring that stormwater is managed and contained through projects in the City's rights of way or through programs for stormwater management and treatment.

Chapter 7, Transportation

7-62 The City will consider the environmental impacts of the overall transportation system and act to mitigate negative effects and enhance positive features.

7-63 The City understands the importance of managing stormwater runoff from transportation infrastructure and will design and operate transportation infrastructure to keep stormwater properly collected, treated, and out of water supplies.

FINDING: This finding addresses policies 7-62 and 7-63 above. The proposal is consistent with Policy 7-62 because the Stormwater PFP includes projects in Tables 32 and 33 that are included to mitigate the negative effects of stormwater runoff. The projects intended to either replace, improve, or establish new UICs in the public rights-of-way are included to mitigate the negative impacts of stormwater flooding and runoff. The proposal is also consistent with Policy 7-63 because the 2025 Stormwater PFP includes several short-term and long-term projects intended to properly collect and treat stormwater and keep it out of water supplies. Tables 32 and 33 present several projects that either improve or replace facilities for properly collecting and treating stormwater in the City rights-of-way. The projects will ultimately be designed to treat collected stormwater runoff.

With respect to the proposed amendments to the text and policies of Chapter 8, these proposed amendments are also consistent with these plan policies because they include methods of stormwater management that will be located within city rights of way, thereby ensuring stormwater runoff from transportation infrastructure will be properly collected, treated, and out of water supplies.

Chapter 8, Public Facilities and Services

Storm Drainage Facilities and Systems

FINDING: The proposal includes a number of changes to the existing policies for Storm Drainage Facilities and Systems in Chapter 8 of the Comprehensive Plan. The findings below demonstrate compliance of the proposed Stormwater Public Facility Plan with the proposed policies, including those proposed for amendment. The Track Changes version of the Chapter 8 amendments is enclosed as Exhibit B, with the Clean version of the Chapter 8 amendments shown as Exhibit C. The proposed Storm Drainage Facilities and Systems Policies are renumbered to reflect several policies proposed for deletion. The attached Track Changes and Clean versions of Chapter 8 reflect the renumbering of policies.

8-22 The City of Bend is the stormwater utility for the city limits and Urban Growth Boundary. As the utility, the City intends to review its Stormwater Master Plan and Integrated Stormwater Management Plan as needed for compliance with changes in state or federal requirements and at least every five years.

FINDING: The proposed Stormwater PFP is consistent with this plan policy because it represents the product of the city's review of its Stormwater Master Plan. This Stormwater PFP acknowledges the City as the stormwater utility for the City and UGB and includes a series of projects outlined in Tables 32 and 33 to ensure the City complies with its federal Municipal Separate Stormwater System (MS4) permit and both federal and state requirements for water quality.

8-23 The City will consider funding options (e.g., SDCs, grants, low-income loans) for stormwater capital projects in accordance with applicable laws.

FINDING: The proposed Stormwater PFP is consistent with this policy because it recognizes that funding beyond the stormwater utility fee revenue may be needed for certain capital projects to complete them sooner.

8-24 The City will consider codes and standards to support effective stormwater management in new development, redevelopment and infill development that supports dense urban form and housing production goals.

FINDING: The proposed Stormwater PFP is consistent with this policy because it also recognizes that updates to the City's codes and standards for stormwater management will be needed to allow for new methods and practices and to expand existing practices (e.g. regional stormwater facilities).

8-25 The City will require development, to the extent practicable, to contain and treat storm drainage within the boundaries of the development, which may be one property or a group of adjacent properties being developed under a common scheme. In instances where containing storm drainage on the site would be technically infeasible or would not support the planned development pattern, the City will consider regulations that allow a developer to enter into a formal and recorded arrangement with the City or a private party to adequately address the storm drainage off site, such as a regional control. The City may adopt regulations requiring maintenance and access agreements for stormwater facilities, consistent with its permits from DEQ.

FINDING: The proposed Stormwater PFP and proposed amendments to Chapter 8 are consistent with this policy because they continue to support the practice of containing stormwater on a property or group of properties. The proposed PFP and amendments to Chapter 8 are also consistent with this policy because they support the City's ability to consider other design solutions and methods of stormwater management such as a regional control.

8-26 The use of stormwater disposal systems will be coordinated with the Oregon Department of Environmental Quality and Water Resources Department to protect ground water and surface water.

FINDING: The proposed Stormwater PFP is consistent with this plan policy because it continues the current practice of coordinating with DEQ and Water Resources to ensure the City's methods and practices for stormwater management protect ground water and surface water. The proposed PFP includes projects in Tables 32 and 33 that are intended to further manage stormwater runoff and protect ground and surface water quality.

8-27 The City will work to minimize the discharge of untreated stormwater run-off from streets directly into the Deschutes River and Tumalo Creek.

FINDING: The proposed Stormwater PFP is consistent with this policy because it includes a series of projects intended to improve stormwater outfalls to the Deschutes River. Figure 4 of the PFP presents the stormwater outfall basins that direct stormwater to the Deschutes River. Tables 1 to 31 include the inventory of outfalls, pipes, and their condition, which informed the development of certain short term and long-term projects in Tables 32 and 33, respectively, of the PFP.

8-28 The City will regulate stormwater facilities in accordance with the City's Stormwater Master Plan and will meet appropriate drainage quantity and quality requirements, including, but not limited to, the requirements of the City's National Pollutant Discharge Elimination System (NPDES) MS4 Stormwater Permit, Integrated Stormwater Management Plan, WPCF UIC Permit and any applicable Total Maximum Daily Load requirements (TMDL) requirements.

FINDING: The proposed Stormwater PFP is consistent with this plan policy because it reflects the evaluation of the City's existing storm sewer system that informed the development and prioritization of projects in the short term and the long term. Completing

these projects will ensure the City continues to comply with the requirements of the NPDES, its MS4 Stormwater Permit, Stormwater Management Plan, and TMDL.

8-29 The ability to provide stormwater facilities for developments proposed for annexation into the City will continue to be a consideration for annexation approval.

FINDING: This plan policy is not applicable because the proposed Stormwater PFP does not propose any amendments to the City's Development Code regarding annexation.

8-30 The City will reduce the quantity of runoff and discharge of pollutants to the maximum extent practicable by integrating stormwater runoff controls into new development, redevelopment, and infill development. The City may adopt and enforce regulations requiring controls to minimize illicit discharges or pollutants of concern.

FINDING: This plan policy is not applicable because the proposed Stormwater PFP does not propose any amendments to the City's Development Code regarding integration of stormwater runoff controls into land use application review. The Stormwater PFP focuses on programs and projects that the City will complete to ensure effective management of stormwater runoff. The proposed amendments to this policy as proposed are intended to provide policy support to the City to consider methods for reducing stormwater runoff through new development, redevelopment, and infill.

8-31 The City will continue to implement and enforce requirements for an erosion and sediment control program for public and private construction and post-construction activities.

FINDING: This plan policy is not applicable because it focuses on implementation of existing city programs. The Stormwater PPF proposes new programs in Tables 32 and 33 of the short-term and long-term projects but does not recommend any changes to implementation or enforcement of these requirements.

8-32. The City will seek efficiencies and consistency by working with other municipalities and stakeholders within Central Oregon on land use issues to address flood control, watershed health and stormwater pollution prevention.

FINDING: The proposed Stormwater PPF is consistent with this policy because the project team coordinated with other agencies, districts, and stakeholders to get their input and feedback. This work is reflected in Appendix F, Public Involvement Materials, of the Stormwater Master Plan. The proposed Stormwater Master Plan and its appendices have been uploaded to the record in CityView and form the factual base in support of the 2025 Stormwater PFP.

8-33 The City will consider regulations on development to mitigate impacts of development on flood zones, groundwater, drinking water protection areas, and riparian corridors and natural drainageways.

FINDING: This policy is not appliable to the review of the Stormwater PFP because it provides a policy basis for including regulations in the City's codes, standards, and specifications. The 2025 Stormwater PFP does not propose new or additional changes to such regulations in flood zones, groundwater protection areas, or riparian area and drainageways. The proposed amendments to this policy are intended to support future actions by the City to ensure impacts of stormwater runoff can be mitigated.

8-34 The City will consider regulations for development on slopes in excess of 10 percent to mitigate impacts to changes in drainageways and stormwater runoff from such development.

FINDING: The proposal meets this policy because it continues to rely on regulations in excess of 10 percent to mitigate impacts of stormwater runoff. The proposed changes to this policy provide the City with policy support for future regulations regarding stormwater.

8-35 The City will require development types that have the potential for contributing pollutants that pose a risk to water quality, including commercial and industrial uses, to implement and maintain best management practices consistent with the City's stormwater permits

FINDING: The proposed amendments to this policy are intended to simplify it and its use in supporting the adoption and enforcement of regulations regarding certain commercial and industrial uses. The proposed Stormwater PFP is consistent with this amended policy because it includes projects in both the short term and the long term intended to ensure the City meets its obligations under its stormwater permits.

8-36 The City recognizes the relationship between air pollution and water pollution in the deposition of airborne contaminants, including metals and fine particulate matter onto streets and other surfaces, and will consider regulations to minimize or mitigate such pollution.

FINDING: This plan policy informs the development of future standards and specifications for UIC's to ensure they are designed and constructed to address airborne contaminants. The proposed Stormwater PFP is consistent with this policy because it also includes projects (See Tables 32 and 33) that will need to be designed to address airborne contaminants in stormwater runoff. These projects include, but are not limited to, those in City street rights-of-way that will include new or replaced UICs.

8-37 To minimize illicit discharge to stormwater and groundwater from septic systems, the City shall require lots with onsite sewage disposal to connect to the city sanitary sewer whenever state rules governing connection are met.

FINDING: This plan policy is not appliable to this review of the proposed Stormwater PFP. The policy focuses on potential impacts of the use of septic systems on stormwater and groundwater. The Stormwater PFP does not propose any new programs or projects related to the potential discharge to stormwater or groundwater from septic systems.

8-38 The City recognizes that climate change will likely increase the intensity and frequency of stormwater events, and will consider the likely impacts of climate change in its stormwater regulations.

FINDING: This plan policy is the only new policy proposed with the amendments to Chapter 8 of the Comprehensive Plan. The Stormwater PFP is consistent with this new policy because its development included analysis of climate change and its effects on storm intensity and frequency. This work is included in Appendix D, Policy Papers and Presentations, of the Stormwater Master Plan technical appendices. Appendix D includes a presentation on climate change and its effect on the City's stormwater system.

Chapter 10, Natural Forces

10-16 The location and design of streets, structures and other development features on slopes in excess of 10 percent shall give full consideration to the natural contours, drainage patterns, and vegetative features of the site to protect against temporary and long-term erosion.

FINDING: The proposal is consistent with this plan policy because the projects presented in the 2025 Stormwater PFP will be further designed, planned, and constructed to collect and treat stormwater to prevent any temporary or long-term erosion. The projects included in Tables 32 and 33 of the PFP will eventually be planned and designed to meet the City's Standards and Specifications, which when followed will ensure the future stormwater facilities will protect against temporary and long-term erosion.

Chapter 11, Growth Management

11-66 Existing rural infrastructure systems and urban systems (water, sewer, transportation, stormwater) serving annexed areas may be required to be modernized and constructed to the City's standards and specifications, as determined by the City.

FINDING: The proposal is consistent with this plan policy because the 2025 Stormwater PFP includes projects intended to serve areas included in the Bend UGB. Table 33 of the PFP presents the Stormwater PFP's long-term projects (6 to 20 years). One of these projects, "Dove Lane Drainage Improvements," is intended to provide stormwater infrastructure for this area of the UGB that was formerly part of unincorporated Deschutes County. This project will install stormwater infrastructure to manage approximately 2.25 acres of stormwater runoff.

Based on the forgoing findings, Staff finds that the proposal satisfies BDC 4.6.200(B)(2).

3. The applicant can demonstrate a public need or benefit for the proposed amendment.

FINDING: The proposal meets this criterion because the 2025 Stormwater PFP and proposed amendments to Chapter 8 of the Comprehensive Plan demonstrate both a public need and a public benefit for these amendments. This report addressed a similar criterion with a finding addressing the Preface of the Comprehensive Plan, which is repeated here. The public need in this case is the need for an updated Stormwater Public Facility Plan. The current Stormwater PFP was developed and adopted in 2014. Since that time, the City completed a significant Comprehensive Plan update, including a UGB expansion of 2,380 acres. Two additional areas have been added to the UGB, the Parkside Place Master Plan and the Stevens Road Tract, and several master plans have been approved for development in other expansion areas and in areas already within the UGB. The public benefits for these proposed changes include the implementation of the projects identified in the 2025 Stormwater PFP and updated policies for storm drainage facilities and systems in Chapter 8 of the Bend Comprehensive Plan.

BDC 4.6.500 Record of Amendments.

The City Recorder shall maintain a record of amendments to the text of this Code and the land use districts map in a format convenient for public use.

FINDING: In the event the 2025 Stormwater PFP and proposed amendments to the text of Chapter 8 of the Comprehensive Plan are adopted by ordinance, the City Recorder will maintain a record of the amendments and the revised provisions will be included as part of the Comprehensive Plan available to the public on the City's website.

BDC 4.6.600 Transportation Planning Rule Compliance.

When a development application includes a proposed comprehensive plan amendment or land use district change, or both, the proposal shall be reviewed to determine whether it significantly affects a transportation facility, in accordance with Oregon Administrative Rule (OAR) 660-012-0060.

FINDING: This criterion is not applicable because the proposal before the Planning Commission does not include a development application that includes a proposed plan amendment, a land use district change, or both. The proposal includes adoption of a 2025 Stormwater Public Facility Plan and amendments to the text of Chapter 8, Public Facilities and Services, of the Bend Comprehensive Plan.

IV. CONCLUSION: Based on the findings throughout this report, the proposed amendments to the Bend Comprehensive Plan, the proposed 2025 Stormwater Public Facility Plan, and amendments to the Storm Drainage Facilities and Systems text and policies of Chapter 8 of the Comprehensive Plan, meet all applicable criteria for City Council adoption.

V. RECOMMENDATION: Staff recommends that the Planning Commission recommend approval of the 2025 Stormwater Public Facility Plan and proposed amendments to the text of Chapter 8, Public Facilities and Services, of the Comprehensive Plan to the City Council.

Section 1. Introduction

This Stormwater Public Facilities Plan (Stormwater PFP) describes the existing stormwater facilities in the City of Bend (City) and its plans for future facilities needed over a 20-year planning period. This Stormwater PFP relies on information from and incorporates portions of the 2025 update to the City's Stormwater Master Plan (SMP), which will be presented for adoption by City Council concurrently with this plan.

This Stormwater PFP describes existing City facilities and plans for service within the Bend Urban Growth Boundary (UGB) and is consistent with Statewide Planning Goal 11, Public Facilities and Services, and its implementing administrative rule within Oregon Administrative Rules (OAR) 660-011. The purpose of the plan is to help assure that urban stormwater facilities and services are provided in a timely, orderly and efficient fashion and support the infrastructure needs of the area.

Section 2. Stormwater Public Facilities Plan

The planning area for the Stormwater PFP encompasses approximately 21,320 acres (35 square miles) in the City of Bend and within its UGB as shown in Figure 1, Vicinity Map.

The City is the stormwater utility provider for the UGB. There are no other special districts that provide stormwater management in the right-of-way (ROW).

The 2025 update to the City of Bend's Stormwater Master Plan was prepared by Otak, Inc. The draft SMP was released for public review in August 2025. The final SMP will be considered for adoption by the City Council in January 2026, concurrent with amendments to stormwater policies in Chapter 8, Public Facilities and Services, of the City's Comprehensive Plan and this Stormwater PFP.

The City coordinated with the affected units in development of this PFP through the Utility Public Advisory Group (UPAG) that was later renamed the Water Advisory Group (WAG), and includes members from the following organizations:

- Oregon State University (OSU) Extension Services
- Oregon Water Resources Department
- Bend-LaPine School District
- Bend Parks and Recreation District
- Oregon Department of Environmental Quality
- Deschutes County

There are no private providers of public stormwater facilities within the City of Bend or its UGB.

Section 3. Storm Sewer Inventory and General Assessment

The definition of storm sewer in OAR 660-011-000 includes both outfalls and major drainageways, which are further defined as major trunk lines (stormwater mainlines), streams, ditches, pump stations, and retention basins.

Rivers and streams are inventoried on Figure 1, Vicinity Map. The Deschutes River is the only surface water body that receives piped stormwater runoff within the City of Bend. Tumalo Creek runs along the western border of the City limits through mainly natural parklands within Shevlin Park.

The City primarily relies on a dispersed drainage system which infiltrates and injects stormwater close to the source of runoff. This approach has the benefit of more closely mimicking the natural hydrography and infiltration rates that might be expected in a natural condition than those systems that pipe all runoff directly to a surface waterbody. The City's dispersed stormwater system is composed of approximately 6,000 drywells and 1,000 drillholes, both of which are underground injection controls (UICs) (see Figure 2 and Figure 3, respectively). The City completed a Systemwide Assessment of its UIC system in March 2023 (Appendix A).

In the central portion of Bend, the City owns and maintains a municipal separate storm sewer system (MS4), which is a piped system that carries stormwater to the Deschutes River (see Figure 4). The City has approximately 80 miles of storm pipe. Approximately 7 miles of the total are within the MS4 area, active and city owned, and drain to the 36 outfalls on the Deschutes River, according to geographic information system (GIS) records. The MS4 area includes a portion of the City between Awbrey Butte and Old Bend, as well as two smaller areas near Farewell Bend Park and Archie Briggs Road. The remainder of the storm pipes serve as connectors to UICs or surface infiltration facilities. In some areas, the City has up-basins that daylight stormwater back onto the street for overland flow.

Within the UGB but outside of City limits, very little public stormwater infrastructure exists.

The majority of Bend's public storm sewer infrastructure has been installed starting in the mid- to late 20th Century, and the oldest pipes and UICs may be nearing the end of their expected useful lives of typically 50-75 years. This can vary by material, loading and soil acidity/conductivity.

The City maintains a GIS record of stormwater mainlines and conducted a closed-circuit television CCTV survey of the downstream-most outfall pipe segments in 2024 in preparation for the SMP and Stormwater PFP. This focused effort collected data on the most significant pipe segments in the MS4 system. The condition of many of the upstream storm pipes in the MS4 area remains unknown. Implementing regular CCTV inspections is identified as a priority level of service action in the SMP. Findings from the 2024 CCTV survey have been used to classify the condition of stormwater mainline segments as good, fair, poor, or unknown. Pipe condition was evaluated by a Professional Engineer who reviewed the 2024 CCTV Report prepared by City of Bend. The following criteria were used to classify pipe condition:

- Unknown - No available data
- Poor - Holes, cracks, or other issues affecting ability to contain flows within system
- Fair - Dents or other issues that do not impact ability to contain flows within system
- Good - Good reported condition or no issues reported

Table 1 through Table 31 inventory the stormwater mainlines within each outfall basin and contain the following pipe attributes: ID number, pipe shape, pipe size, material, installation date, condition, and length of pipe segment. A detailed inventory of stormwater pipes outside of the MS4 area which do not

outfall to the river has not been provided because the remaining inventory consists of numerous short and non-continuous pipe segments which convey stormwater to UICs or other infiltration facilities, and are therefore not considered “significant public facility systems” for the purpose of the condition assessment in this PFP, under OAR 660-011-0020(1).

Section 4. Stormwater Improvements to Support Growth

Stormwater facilities to serve growth in Bend are typically provided by the parties undertaking land development projects, including both private parties and public agencies. These include private facilities that are designed to retain the 25-year storm on the site of the development as well as facilities in the ROW which are then dedicated to the City. Because of the reliance on UICs and other facilities which infiltrate stormwater runoff into the ground near its source, and the requirement for land developers to construct the required stormwater management facilities on site to serve their developments, Bend does not create specific plans for new interconnected piped drainage systems to serve growth.

The projects contained in the Stormwater PFP address drainage issues and water quality issues based on established need in the existing condition using analyses described in the Stormwater Master Plan. New and upgraded stormwater drainage and water quality facilities will be sized to serve full build-out of their contributing basins based on the Comprehensive Plan and the assumptions for public facility drainage in Bend's Standards and Specifications.

The prioritization document in Appendix B was used to develop and prioritize the infrastructure improvement projects incorporated into the Stormwater Master Plan and this Stormwater PFP. As these projects are addressed, they will be brought up to current standards of designing to the 25-year storm with safe passage for the 100-year 24-hour NRCS Type 1 design storm, as outlined in the City's Standards and Specifications and Bend Municipal Code Title 16, both of which refer to the Central Oregon Stormwater Manual (2010).

New outfalls to the Deschutes River are not consistent with the City's Comprehensive Plan and are not anticipated. Planned stormwater projects will minimize discharge of untreated stormwater runoff from outfalls, consistent with the City's Comprehensive Plan.

Section 5. Stormwater Capital Improvement Projects

This section lists and describes the City's short- and long-term stormwater capital improvement projects. As defined in OAR 660-011-0005, short-term projects include those scheduled for years one through five of the plan. This Stormwater PFP begins in Fiscal Year (FY) 2026 (2025-26). Long-term projects are scheduled for years six through twenty. All projects may be amended based on site-specific information, new technologies, and availability of resources. The City may change priorities of projects, depending on development demand or other factors. The City may construct other stormwater projects not included in these lists based on demand, resource availability, failure or problems with existing facilities, or other reasons.

The PFP may allow for the following modifications to projects without amendment to the PFP in accordance with OAR 660-011-045(3):

- Administrative changes are those modifications to a public facility project which are minor in nature and do not significantly impact the project's general description, location, sizing, capacity, or other general characteristic of the project (OAR 660-011-045(3)(a));
- Technical and environmental changes are those modifications to a public facility project which are made pursuant to "final engineering" on a project or those that result from the findings of an Environmental Assessment or Environmental Impact Statement conducted under regulations

implementing the procedural provisions of the National Environmental Policy Act of 1969 (40 CFR Parts 1500–1508) or any federal or State of Oregon agency project development regulations consistent with that Act and its regulations. (OAR 660-011-045(3)(b)).

The Adopted Biennial Budget FY2025-2027: Stormwater Utility (Appendix C), contains the current five-year stormwater capital improvement program. Table 32 lists the planned short-term projects and programs identified in the 2025 SMP and biennial budget. Rough cost estimates for each project are presented in 2025 dollars. Rough costs estimates are defined under OAR 660-011-0005(2) as approximate costs expressed in current-year (year closest to the period of public facility plan development) dollars.

Additionally, as a short-term and continuing item, the City has funds allocated for a Major Maintenance program.

Table 32 Short-Term Stormwater Infrastructure Improvement Projects (1-5 years)

Project Name / Working Name	Description	Project Benefit(s)	Planning-Level Cost Estimate	Approximate Year of Implementation
1SSW3 SW Sewer Basin Improvements Phase 3	This project addresses existing sewer infrastructure deficiencies and future capacity needs for Bend's Southwest Sewer Basin. This is only for the stormwater portion of the project.	▪ Improved drainage ▪ Synergy opportunity with other ongoing capital projects	$500,000	2027
1RSAB South Awbrey Butte Drainage Improvements	Project area includes the southern hillside of Awbrey Butte as it directs drainage flows to the Newport Avenue Storm Drain System and all surrounding areas which drain towards Newport Avenue. Projects will improve deficient segments of the Newport Avenue Storm Drain System and upstream basin drainage problem areas.	▪ Improved drainage ▪ Reduced flooding ▪ Improve water quality of runoff ▪ Reduced undesirable overland flow	$15,450,000	2029
1RFGU Franklin Stormwater Improvements, Phase 1	This project is being combined with 1TMTC Midtown Crossings project and executed concurrently for synergy and efficiencies. A stormwater study will be completed for both the Greenwood and Franklin underpasses. The Franklin underpass is expected to be reconstructed with stormwater improvements incorporated.	▪ Improved drainage ▪ Increased road safety ▪ Increased pedestrian safety	$1,216,000	2026

Table 32 Short-Term Stormwater Infrastructure Improvement Projects (1-5 years)

Project Name / Working Name	Description	Project Benefit(s)	Planning-Level Cost Estimate	Approximate Year of Implementation
1RFGU Greenwood Stormwater Improvements, Phase 1	This project is being combined with 1TMTC Midtown Crossings project and executed concurrently for synergy and efficiencies. A stormwater study will be completed for both the Greenwood and Franklin underpasses. The Greenwood underpass will not have stormwater improvements included until full resolution is reached on Greenwood improvements.	▪ Improved drainage ▪ Increased road safety ▪ Increased pedestrian safety	$1,824,000	2026
Drillhole Water Quality Retrofit Program *(ongoing)*	There are a number of drillholes that are within the two-year time of travel (TOT) zone for drinking water wells and pose a risk for contaminating the water source. This program either retrofits existing facilities to improve water quality or replaces the existing facilities outside the two-year TOT zone. The short-term phase addresses the highest priority drillholes.	▪ Improved groundwater quality ▪ Increased protection of drinking water from pollutants	$750,000	2030
Stormwater Major Maintenance Program *(ongoing)*	This capital program includes potential projects for drainage improvements. These projects are known stormwater drainage problem areas. During large storm events, runoff from the right-of-way may flow overland on an undesirable path and/or create unsafe conditions for travel.	▪ Improved drainage ▪ Increased road safety ▪ Reduced undesirable overland flow	$6,620,000	2026
Total			**$26,360,000**	

The City's list of long-term capital improvement projects, including cost estimates, is shown in Table 33. As projects are constructed, they will be brought up to current design standards required by the City's Standards and Specifications and the Central Oregon Stormwater Manual. The timing of all long-term stormwater infrastructure improvement projects is dependent upon the availability of funding and the relative need for the project as well as changes to the utility's level of service and impacts from climate change.

Table 33 Long-Term Stormwater Infrastructure Improvement Projects (6-20 years)

Project Name / Working Name	Description	Project Benefit(s)	Planning-Level Cost Estimate
Franklin Stormwater Improvements, Phase 2	Phase 2 of this project will focus on upstream improvements that contribute to the Frankin Ave drainage basin.	▪ Improved drainage	*
Greenwood Stormwater Improvements, Phase 2	Phase 2 of this project will focus on upstream improvements that contribute to the Greenwood Ave drainage basin.	▪ Improved drainage	*
Riverfront Street Stormwater Improvements	This project seeks to improve stormwater quality discharging to the Deschutes River from Outfall 128 and improve neighborhood drainage.	▪ Increased surface water quality ▪ Local infiltration ▪ Better understanding of the existing stormwater system	$880,000
Downtown Pedestrian Safety Drainage Improvements	This project seeks to improve a series of drainage problems within a study area in downtown Bend. There are several intersections that, during moderate rain events, do not drain properly and block access to the curb's ADA ramps. In cold weather, this freezes over, causing hazardous pedestrian conditions.	▪ Improve drainage ▪ Improve road safety ▪ Improve pedestrian safety	$770,000
Drake Park Stormwater Quality Improvements	This project seeks to improve stormwater quality discharging to the Deschutes River from Outfall 018 and improve conveyance of runoff in parts of Old Bend near Drake Park.	▪ Increased surface water quality ▪ Local infiltration ▪ Better understanding of the area's existing stormwater system	$4,140,000
Congress Street Drainage Improvements	This project seeks to improve drainage in an area of Old Bend that does not have sufficient existing infrastructure. During rain events, stormwater in this area exceeds the curb height of the ROW and creates undesirable overland flow.	▪ Flood mitigation ▪ Increased road safety ▪ Reduced undesirable overland flow	$1,320,000
Vicksburg Avenue Drainage Improvements	This project seeks to improve drainage in the Awbrey Butte area that does not have sufficient existing infrastructure. During rain events, runoff from the ROW often creates undesirable overland flow. Mitigation strategies have only pushed the problem to different locations, and flooding remains a problem during large rain events.	▪ Flood mitigation ▪ Increased road safety ▪ Reduced undesirable overland flow	$490,000

Table 33 Long-Term Stormwater Infrastructure Improvement Projects (6-20 years)

Project Name / Working Name	Description	Project Benefit(s)	Planning-Level Cost Estimate
Galveston Avenue Stormwater Quality Improvements	This project seeks to improve stormwater quality discharging to the Deschutes River from Outfall 020. A combination of solutions will treat the runoff from an estimated 18.56 acres of impervious surface. Project timeline is escalated to better align with other improvements on Galveston Ave.	▪ Increased surface water quality ▪ Integration of innovative green solutions	$5,820,000
Fresno Avenue Stormwater Improvements	This project seeks to improve stormwater quality discharging to the Deschutes River from Outfall 020. This will be achieved by improving infiltration in the neighborhood with deep drywells and repairing damaged infrastructure.	▪ Increased surface and ground water quality ▪ Flood mitigation ▪ Increased road safety	$4,230,000
12th Street Stormwater Quality Improvements	This project seeks to improve stormwater quality discharging to the Deschutes River from Outfall 024. This project will treat an estimated 3 acres of impervious surface.	▪ Increased surface water quality	$1,040,000
Dove Lane Drainage Improvements	Formerly unincorporated Deschutes County land, this location does not have stormwater infrastructure. This project will install stormwater infrastructure to manage approximately 2.25 acres of stormwater runoff.	▪ Flood mitigation ▪ Reduced undesirable overland flow	$390,000
Saginaw Avenue Stormwater Quality Improvements	This project seeks to improve stormwater quality discharging to the Deschutes River from Outfall 012. This will be achieved through installation of “stormwater trees,” which are tree planter inlet and pass-through vault structures which use biofiltration as well as plant transpiration to reduce pollutants and runoff volume on neighborhood streets, and underground treatment facilities that will filter out sediments and pollutants.	▪ Increased surface water quality ▪ Increased tree canopy ▪ Improved stormwater conveyance	$2,620,000
Campbell Rd Drainage Improvements	This project seeks to improve drainage on W Campbell Ave to prevent downstream impacts on SW Century Drive. Stormwater from the ROW and unimproved land flows overland, depositing debris and causing localized flooding. Ponding on SW Century Drive impacts road safety.	▪ Reduced emergency maintenance needs ▪ Flood mitigation ▪ Increased road safety	$130,000

Table 33 Long-Term Stormwater Infrastructure Improvement Projects (6-20 years)

Project Name / Working Name	Description	Project Benefit(s)	Planning-Level Cost Estimate
Drillhole Water Quality Retrofit Program *(ongoing)*	There are a number of drillholes that are within the two-year time of travel (TOT) zone for drinking water wells and pose a risk for contaminating the water source. This program either retrofits existing facilities to improve water quality or replaces the existing facilities outside the two-year TOT zone. The long-term phase addresses the remaining identified drillholes.	▪ Improved groundwater quality ▪ Increased protection of drinking water from pollutants	$4,950,000
Failing UIC Drainage Improvement Program	This capital program includes potential projects where drywells or drillholes no longer function as intended and cause drainage issues during storm events. Failing UICs can cause runoff to accumulate on roads and private property, often leading to traffic impacts and undesirable overland flow. City staff respond to these locations frequently.	▪ Improved drainage ▪ Increased road safety ▪ Reduced undesirable overland flow	$5,340,000
Stormwater Major Maintenance Program *(ongoing)*	This capital program includes potential projects for drainage improvements. These projects are known stormwater drainage problem areas. During large storm events, runoff from the right-of-way may cause undesirable overland flow or create unsafe conditions for travel.	▪ Improved drainage ▪ Increased road safety ▪ Reduced undesirable overland flow	$17,985,000
Total			**$50,105,000**

** City is determining if this work will be completed through a city-funded CIP or through private development*

Section 6. Costs and Funding Mechanisms

The City of Bend's Stormwater Utility was created in April 2007 and charges a monthly fee based on equivalent residential units (ERU). One ERU is equal to 3,800 square feet of "impervious surface" coverage, which is the average amount for a single-family home in Bend. All non-single-family parcels pay a multiple of the base rate specific to their measured impervious area. As of July 1, 2025, the stormwater utility fee is $8.16 per ERU. The City's stormwater utility is funded by this service charge and sometimes grant money for special projects. As an enterprise fund, the service charge funding can only be spent to address stormwater. The City limits actual construction of projects to those for which there is funding from the Stormwater Utility Fund. The service charge pays for a comprehensive stormwater program including operation and maintenance of stormwater facilities, engineering and project management, water quality management, public education and outreach, utility administration and public response, as well as capital improvement projects.

The City plans to undertake a cost of services and rate study based on the costs estimated in the 2025 SMP.

Table 32 and Table 33, above, provide Class 5 planning-level cost estimates for each of the public facilities projects in 2025 dollars, not accounting for future inflation. Table 34, below, provides the City's 2025-2027 Biennial Budget for Stormwater. In the event that fees do not provide sufficient funding, projects will be delayed until funds are available.

Section 7. Facilities for Future Development

Stormwater facilities for future projects will be planned and developed on a per-project basis based on the following development rules:

- Bend Municipal Code Title 16, Grading, Erosion Control, Stormwater, Illicit Discharge, Tree Protection, and Wells
- City of Bend Standards and Specifications
- Central Oregon Stormwater Manual

Changes to development rules will be informed by requirements in the City's MS4 Phase II and Water Pollution Control Facilities (WCPF) permits and implemented by the City's Water Services and Engineering Departments.

The City's stormwater system is dispersed and private development is required in accordance with Bend Municipal Code Title 16 to keep stormwater on-site for the 25-year Type I NRCS storm event and is responsible for ensuring safe passage for the 100-year event. Due to these conditions, specific drainage facility projects for new development (such as piped systems) are not planned by the City.

The City's approach to public facilities as described in the City's Standards and Specifications is to design to the 25-year 24-hour Type I NRCS storm event, provide safe passage for the 100-year event, and provide stormwater treatment and drainage near the source of accrual via surface infiltration and sub-surface injection systems. Thus, the locations needed to do this have been captured in the calculations for right-of-way.

SECTION 1: Introduction

The City of Bend (City) owns and operates about 6,500 Underground Injection Control (UIC) devices to manage stormwater runoff from municipal rights of way by infiltrating it into subsurface soils. The City's UICs are shown in Figure 1-1, and are listed in Appendix A. About 5,500 of the City's UICs are drywells, and about 1,000 of the City's UICs are drill holes. Drywells are typically 10 to 20 feet deep cylindrical structures constructed of 4-foot diameter concrete rings with weep holes. Drill holes are typically 6-inch diameter open boreholes drilled up to 100 feet deep and completed with a steel surface casing (generally 10 to 20 feet). The drill holes are older and have not been allowed in the City's Standards for several years (City of Bend, 2012). In Figure 1-1, the drywells are shown as triangles and the drill holes are shown as squares.

The Department of Environmental Quality (DEQ) authorized the City's UICs by issuing an area-wide UIC Water Pollution Control Facilities (WPCF) permit[1] to the City on May 14, 2013, called the "2013 Permit" in this System-Wide Assessment. The 2013 Permit expires on April 30, 2023, and the City is applying to renew the permit (called the "2023 Permit" in this System-Wide Assessment). Schedule B, Condition 1 of the permit requires that the City develop a System-Wide Assessment describing the injection systems that it owns and operates. The goal of the System-Wide Assessment is to compile data that can be used to ensure that the City's UICs are protective of human health and the environment. The objectives of the System-Wide Assessment are:

- Develop an inventory of City-owned and -operated UIC locations;
- Estimate the relative traffic volumes within UIC drainage basins (i.e., greater than or less than 1,000 vehicle trips per day);
- Identify UICs that are within setbacks to water wells (i.e., within 500 feet of a water well or within the two-year time-of-travel zone of a water well);
- Identify UICs that discharge directly to groundwater; and
- Develop a dataset that can be used to adaptively manage the City's UIC system.

The City prepared a System-Wide Assessment in December 2012 (City of Bend, 2012), and DEQ approved the System-Wide Assessment in conjunction with the issuance of the 2013 Permit. This document is an updated System-Wide Assessment that was prepared as part of the renewal application for the 2023 Permit.

Table 1 summarizes the content of this System-Wide Assessment and the location of the content in the text. The permit references are from the 2013 Permit.

SECTION 2: **UIC Inventory**

2.1 UIC Identifier, Status and Location

Appendix A provides status of each City UIC (active, under construction, or closed [formal closure, plugged and abandoned, temporarily abandoned, or temporarily abandoned under review)], UIC identifier, and UIC location by latitude and longitude. Each UIC has two identifiers in Appendix A, one that is used by the City and another that is assigned by DEQ:

- **City Identification Number.** The City assigns a unique identifying number to each UIC. The "DDW" identification is used for drywells, and the "DDH" identification is used for drill holes.
- **DEQ Facility Number.** Each UIC that has been registered with DEQ is assigned a unique identification number using the format XXXXX-YYYYYY. The "XXXXX" number is the 5-digit UIC facility number that DEQ assigned to the City (i.e., 12393 for the City of Bend). DEQ assigns the "YYY" number sequentially to each UIC under the UIC facility number (for example, -1, -2, -3, etc.).

2.2 Geology and Hydrogeology

Geology is used as the framework for demonstrating that UICs are protective of groundwater (see Section 2.5.2). Figure 2-1 is a geologic map showing surficial geology in the vicinity of Bend.

The City is located in the upper Deschutes Basin, an approximately 4,500 square mile area drained by the Deschutes River and its tributaries (Gannett et al., 2001). Geology in the City is complex, and is comprised of a transition zone where multiple distinct volcanic rock units with different origins and characteristics come together. The following subsections provide an overview of the surficial geology in the City organized by geographic area, including the northwest part of the City (Section 1.1.1, characterized by the basalt of Awbrey Butte), southwest part of the City (Section 1.1.2, characterized by tuff and pumice formed by Cascade volcanism), and the eastern part of the City (Section 1.1.3, characterized by basalt flows from Newberry Volcano and local cinder cones).

2.2.1 Northwest Bend Geology: Awbrey Butte

Geology in the northwest part of Bend is dominated by Awbrey Butte, a small basaltic shield volcano that erupted over 4 million years ago (Sherrod et al., 2004). Infiltration tests of three UICs completed in the basalt of Awbrey Butte indicate that the unit is characterized by a relatively low permeability (GSI, 2011).

2.2.2 Southwest Bend Geology: Tuffs and Pumice

Geology in the southwest part of Bend is primarily characterized by tuff (i.e., volcanic ash) and pumice (a porous, permeable volcanic rock) originating from Cascade volcanism. Tuff is often encountered at or near ground surface, and is primarily comprised of the approximately 300,000-year-old Tumalo Tuff (Qtt) and 170,000-year-old Shevlin Park Tuff (Qsp). Tuffs can reach thicknesses of 80 feet (Tumalo Tuff) to over 150 feet (Shevlin Park Tuff). Pumice may be present beneath the tuff, and may reach thicknesses of about 35 feet (Sherrod et al., 2004). The fine-grained tuffs in Bend are unfractured and generally welded and, therefore, are characterized by a low permeability.

2.2.3 East Bend Geology: Younger Volcanics

Geology in Bend east of the Deschutes River is characterized primarily by extensive lava flows that originated from Newberry Volcano south of the City, called the Newberry Basalt (Qbn). Compared to the basalt of

Awbrey Butte, the Newberry basalt is a relatively young, unweathered basalt (erupted less than 780,000 years ago) (Sherrod et al., 2004) and is highly permeable, based on the relatively rapid response (i.e., a couple days) of the water table to canals being turned on and off (Gannett et al., 2001). The Newberry Basalt is the most permeable geologic unit in the City, and is characterized by the most rapid infiltration rates.

2.3 Vehicle Trips Per Day

Pollutant concentrations in stormwater draining municipal rights of way are related to the traffic volume. Specifically, pollutant concentrations are higher on streets with over 1,000 vehicle trips per day (TPD) and are lower on streets with less than 1,000 TPD [Kennedy/Jenks (2009, 2011); City of Gresham (2013); City of Portland BES (2006, 2007, 2008a, 2009, 2010, 2011, 2012)]. TPD data may be considered when selecting UICs for stormwater monitoring. Appendix A provides estimated vehicle trips per day for the streets drained by each UIC that the City owns and operates.

2.4 UICs that Discharge Directly to Groundwater

UICs that discharge directly to groundwater ("wet feet" UICs) were identified by: (1) a depth to groundwater contour map for the City's UIC area and (2) UIC depth measurements. The following sections document the methods that were used to develop the depth to groundwater contour map (Section 2.4.1), UIC depths (Section 2.4.2), and identification of UICs that discharge directly to groundwater (Section 2.4.3).

2.4.1 Groundwater Elevation and Depth to Groundwater Contour Maps

GSI generated a depth to groundwater contour map using the following methodology:

- **Well Identification.** Accurately-located water supply wells in the City of Bend [i.e., wells that have been assigned a latitude and longitude by the Oregon Water Resources Department (OWRD)] were identified by searching the OWRD online-well report query (OWRD, 2023a).

- **Water Level Data Compilation.** Measured groundwater elevations and depths to groundwater at the accurately-located wells were compiled from OWRD's online Groundwater Information System database (OWRD, 2023b), which includes both public and private wells. This database contains water level measurements collected by drillers at the time of well construction and/or by groundwater professionals as a part of annual water level reporting (sometimes required by water rights). Only water levels with a status of "static" were compiled (i.e., the well was not pumping when the water level was measured). If multiple measurements were available for a well, then the median measurement was used.

- **Development of a Groundwater Elevation Contour Map.** A groundwater elevation contour map was developed to identify water levels that were not representative of the regional water table. Specifically, the map was used to identify outliers from regional groundwater trends (i.e., a single depth to water measurement that is inconsistent with the regional trend) and areas of perched groundwater (i.e., multiple depth to water measurements that are inconsistent with the regional trend and appear to follow a local trend).

- **Development of a Depth to Groundwater Map.** After removing water levels that were not representative of the regional water table (i.e., outliers and perched groundwater), the depth to groundwater contour map was developed for the City of Bend.

Data used to develop the groundwater elevation contour map and depth to groundwater map are provided in Appendix B. Seventy-one accurately-located water supply wells with static water level measurements were

identified. Water level measurements from one of the wells (DESC 8499) were considered to be outliers based on the groundwater elevation contour map, and were not used to develop the groundwater elevation contour map or depth to groundwater map. Water level measurements were collected from 1966 through 2022, and during all times of the year. Therefore, the water level measurements are an approximation of the average groundwater table in Bend. While Oregon's UIC rules are based on seasonal high depth to groundwater, it is not necessary to develop a map of seasonal high groundwater for the City of Bend because, as is discussed in Section 2.4.3, there is significant vertical separation distance between the City's UICs and groundwater. Note that the seasonal fluctuation in groundwater levels in the City are on the order of a few feet (see hydrograph for DESC 4713 in Appendix B.3).

The following bullets summarize the results of the groundwater elevation and depth to groundwater contour maps.

- **Groundwater Elevation.** The groundwater elevation contour map is provided in Figure 2-2. Consistent with previous groundwater elevation contour maps (i.e., Gannett et al., 2001), groundwater flow is generally to the northeast, with a more northerly component in the Newberry Basalt (i.e., east of the Deschutes River). Areas of perched groundwater are shown by the peach shading. Groundwater elevations in areas of perched groundwater were not contoured (i.e., Figure 2-2 is a contour map of the regional groundwater table).

- **Depth to Groundwater.** A depth to groundwater map is provided in Figure 2-3. The depth to the regional groundwater table in the City of Bend ranges from about 300 to 750 feet below ground surface (bgs). Areas of perched groundwater in the City are shown by peach shading. Perched groundwater levels can be as shallow as 120 feet bgs. The most significant area of perched groundwater occurs in the northwest portion of the City and extends beyond city limits. Other areas of perched groundwater are highly localized and may be related to canal leakage.

For UICs at the Bend Municipal Airport (Section 17 and Section 18 of Township 17 South and Range 13 East), the depth to groundwater was estimated based on the median depth to groundwater in DESC 52008, which is the Bend Municipal Airport Well (N = 14 measurements, median = 582.5 feet bgs).

2.4.2 UIC Depths

During 2008 and 2009, the City completed an intensive UIC field verification project. Each UIC was inspected, mapped, and all drill hole depths were measured (drywell depths, which are known to be regularly less than 20 feet, were not all measured). This database was updated as new UICs were discovered or installed, as all new UIC installations require a data sheet to be completed and submitted to the City (City of Bend, 2012).

Depths of City UICs (drywells and drillholes) are provided in Appendix A. The following bullets summarize the depths of City-owned drywells and drillholes.

- **Drywells.** The depths of the City's active drywells range from about 2 feet to about 21 feet, and average 12.4 feet. The median City drywell depth is 12.0 feet.

- **Drill Holes.** The depths of the City's active drill holes range from about 1 feet bgs to about 212 feet bgs, and average 31.7 feet. The median City drillhole depth is 22.7 feet.

2.4.3 Identification of UICs That Discharge Directly to Groundwater

UICs that discharge directly to groundwater were identified by comparing UIC depths to groundwater depths. As discussed in Section 2.4.1, the shallowest depths to groundwater occur in the northwestern portion of the City, where depth to groundwater may be as shallow as about 110 feet bgs[2].

- **Drywells.** Because the city's drywells are less than 21 feet deep, no drywells discharge directly to groundwater.

- **Drill Holes.** The City operates 24 drillholes that are deeper than 100 feet bgs and, therefore, have the potential to discharge directly to groundwater. These 24 drill holes are shown as white-filled squares in Figure 1-1, and are primarily located near Awbrey Butte. Comparison of these drill hole locations to the depth to groundwater contour map indicates that the drill holes are located in areas of the City where the depth to groundwater is over 300 feet. Therefore, none of the City's 24 drill holes discharge directly to groundwater.

As discussed above, none of the City's approximately 6,500 active UICs discharge directly to groundwater. Vertical separation distances between the bottom of each UIC and groundwater were calculated for each City UIC and are provided in Appendix A. Note that vertical separation distances are not presented for decommissioned UICs or UICs with a status of "Under Construction."

2.5 UICs That Do Not Meet Setbacks to Water Wells

For the purpose of UIC regulations, "water wells" include municipal supply wells, domestic supply wells, low-temperature geothermal extraction wells[3], and irrigation wells. Schedule A, Condition 8 of the City's UIC WPCF permit establishes the following minimum horizontal setbacks between UICs and water wells: (1) the two-year time-of-travel of a public water well (if a two-year time-of-travel has been determined by the Oregon Health Authority) and (2) 500 feet of a public or private drinking water or irrigation water supply well (if the Oregon Health Authority has not designated a two-year time-of-travel). If UICs are located within setbacks to water wells, then the permit requires that the City demonstrate that the UIC is protective of groundwater quality or decommission the UIC.

The City identified UICs within setbacks to water wells by locating water wells based on resources from OWRD and field visits, and using a Geographic Information System (GIS) analysis to find the horizontal distances between the water wells and City UICs. The following sections provide additional information about the methods and data sources used to identify UICs within water well setbacks.

2.5.1 Water Well Location Map and Two-Year Time-of-Travel Zones

The City developed an inventory of water wells and two-year time-of-travel zones on November 14, 2011, as part of its application for the 2013 Permit (GSI, 2012), and updated the inventory on July 11, 2020, as a part of a stormwater infiltration evaluation (GSI, 2020). This System-Wide Assessment updates the water well inventory as a part of the renewal application for the 2023 Permit. Water well locations were obtained from the following data sources:

- **OWRD Online Well Log Query.** The OWRD on-line well log query contains well construction information that well drillers are required to file after a well is installed. The database includes location information

[2] DESC 4820 has a median depth to groundwater of 110.7 feet bgs. Because this median depth to groundwater is based on measurements from March and April, it likely represents seasonal high groundwater levels.
[3] Low temperature geothermal injection wells are not considered to be "water wells" because they cannot be used to supply drinking water.

for most of the wells drilled in Oregon since 1955; however, the location information is not typically accurate (OWRD, 2008; OWRD, 2023a). Specifically, wells are often only located to a one square mile area (i.e., a section), and are rarely located to an address or latitude/longitude. GSI downloaded well logs from this database on March 3, 2023.

- **OWRD On-Line Water Right Mapping Tool.** The OWRD on-line water right mapping tool contains exact location information for water wells that are authorized to withdraw groundwater under a water right. GSI reviewed this database on March 3, 2023.
- **OWRD Water Level Data Database.** The OWRD water level data database contains groundwater depth measurement at monitoring wells and water wells throughout the state of Oregon. Well locations in the OWRD Water Level Database are exact. This database has since been incorporated into OWRD's Groundwater Information System Database (OWRD, 2023b), which was accessed by GSI on March 3, 2023.
- **City of Bend Municipal Supply Well Locations.** The City of Bend included locations of its municipal supply wells in the water well inventory. No new municipal supply wells have been constructed in Bend since the well inventory was first developed on November 14, 2011.
- **DEQ Facility Profiler.** The DEQ Facility Profiler provides two-year time-of-travel zones that have been approved by the Oregon Health Authority. GSI downloaded the most recent two-year time-of-travel zone database from the DEQ Facility Profiler in February 2023; the database was last updated on August 2, 2019.

The City's water well inventory includes any well that can be located to a property. Initially, water well locations were based on addresses or tax lots on well logs, and latitudes/longitudes associated with water rights. Over time, the City refined the well locations by researching site plans and field-verifying well locations.

A total of 20 new water wells were identified. Most of the newly-identified wells are domestic wells; two new irrigation wells were constructed and one low-temperature geothermal well was constructed. Two database entries for wells (not considered to be one of the 20 new water wells) were water well alterations of wells already in the City's database[4].

A map of water wells in the City of Bend is presented in Figure 3-1, and a map showing two-year time-of-travel zones in the City of Bend is presented in Figure 3-2. A table showing water well name, coordinates, and location accuracy is provided in Appendix C.

2.5.2 Identification of UICs Within Water Well Setbacks

Figure 3-1 and Figure 3-2 show the water wells in the City of Bend with their respective setbacks (i.e., a 500 foot buffer or the two year time of travel). UICs within a setback are shown in red, and are listed in Appendix D. A total of 710 active City UICs are located within a water well setback and/or a two-year time-of-travel zone.

In 2013, the City prepared a Groundwater Protectiveness Demonstration (GWPD) to evaluate if pre-existing UICs within well setback areas were protective. UICs are protective of water wells if the UICs do not violate the prohibition of fluid movement standard or endanger groundwater.

- The **prohibition of fluid movement standard**, defined in 40 Code of Federal Regulations (CFR) 144.12 says that "No owner or operator shall construct, operate, maintain, convert, plug, abandon, or conduct any other injection activity in a manner that allows the movement of a fluid containing any

[4] DESC 63425 is an alteration log for DESC 4892, and DESC 62358 is an alteration log for DESC 61926

contaminant into underground sources of drinking water, if the presence of that contaminant may cause a violation of any primary drinking water regulation under 40 CFR part 142 or may otherwise adversely affect the health of persons."

- **Endangerment** is defined in 42 United States Code (USC) 300h(d)(2) and occurs when injection may result in the presence of any contaminant in underground water which supplies or can reasonably be expected to supply any public water system, if the presence of such contaminant may result in such system's not complying with any national primary drinking water regulation or may otherwise adversely affect the health of persons.

The City's GWPD simulated the fate and transport of the most common, persistent, and toxic pollutants in Oregon municipal stormwater runoff after discharge from a UIC. The GWPD was based on the hydraulic properties in the Newberry Basalt geologic unit (i.e., the most permeable unit in the City that is characterized by the farthest contaminant transport distances) and, therefore, can be applied to all geologic units in the City (because contaminants would not travel as far in the other geologic units). The GWPD concluded that pollutants in stormwater would not reach groundwater as long as there are five feet of vertical separation distance between the bottom of the UIC and groundwater. Because the City's UICs have five feet of vertical separation distance, the UICs are protective of the water wells. It is important to note that the conclusions from the City's GWPD apply to pollutants in typical municipal stormwater, and not to chemical spills because the transport characteristics of free product (i.e., the liquids involved in spills) violate the assumptions of the model that was used for the GWPD.

2.6 UICs Prohibited Under OAR 340-044-0015(2)

Oregon Administrative Rules (OAR) 340-044-0015(2) prohibits the following types of UICs:

- Residential or nonresidential cesspools designed to serve 20 or more people per day;
- UICs that infiltrate fluids from industrial or commercial processes that use hazardous substances or toxic materials including petroleum products;
- UICs that infiltrate fluids from industrial or commercial operation areas where hazardous substances or toxic materials including petroleum products are stored, used or handled (e.g., fuel dispensing areas);
- UICs that infiltrate fluids from floor pits or floor drains at industrial or commercial facilities;
- UICs that inject motor vehicle waste from repair or maintenance activities;
- UICs that inject industrial or municipal wastewater directly into an underground source of drinking water; and
- UICs that inject agricultural drainage.

As shown in Appendix A, the City does not own any UICs that are prohibited under OAR 340-044-0015(2).

SECTION 3: **Facilities that Pose a Risk of Pollutant Discharge to City-Owned UICs**

No commercial or industrial facilities pose a risk of pollutant discharge to permittee-owned and -operated UICs because City-owned UICs drain stormwater runoff from streets.

SECTION 4: **Procedures for Keeping UIC Inventory Current**

The System-Wide Assessment will be maintained using the following methods:

- As required by Schedule B, Condition 4.e, any closure, retrofit, or installation of UICs will be identified in the annual UIC System Report.
- As required by Schedule B, Condition 4.h, any newly-discovered (including newly acquired) UIC will be identified in the annual UIC System Report.
- The City will review Oregon Water Resources Department databases and DEQ databases on an annual basis to identify if any new water wells have been installed within setbacks to UICs, or if any new two-year time-of-travel zones have been delineated.

Notes:

* Water Well Location Database updated through March 3, 2023 and is based on the "All Wells" tabe of the databse provided by the City

[1] Wells were located based on the best available location information, which includes the following subsets of location data (listed in decreasing location accuracy): latitudes and longitudes; City tax lot numbers; street addresses; ¼-¼ section; ¼-section; or section. The location data presented on this table represents the most up-to-date location information, based on the City's field reconnaissance program and/or other location methods (e.g., historical maps, aerial imagery)

Shading:

New or previously unlocated water well as a part of the 2020 Water Well Update
New or previously unlocated water well as a part of the 2023 Water Well Update

Prioritization and Rating

City of Bend Stormwater Master Plan
Capital Project Rating Criteria - Final Version
January 28, 2025

						Score Values			
Criterion	**Weight**	**High Score**	**Max Total**	**Description**	**Scoring Concept**	**0**	**1**	**3**	**5**
1. Conveyance & Flooding									
Frequency of Flooding Event	2.00	5	10.00	Does the project reduce flooding and if yes, for flooding at what frequency?	Projects that address more frequent floods receive more points.	No flooding caused by storm system	Large thunderstorms, Infrequent, Unknown	Large rainstorms, Thunderstorms, Frozen conditions only	Annual, ongoing, or All rains
Flooding Severity/Risk Avoidance	2.00	5	10.00	What types of properties or assets will be protected from flooding under this project? What risks to the traveling public will be avoided under this project?	Projects that address flooding that damages private property or has serious traffic impacts receive more points.	No flooding caused by storm system	Future flooding is predicted only (not observed), flooding on minor streets, no expected property damage, or previous flooding may have been solved and is being monitored	Severity score = Moderate. Includes moderate traffic impacts, flooding on private property (without indication of permanent damage), or pedestrian impacts	Severity score = High. Includes damage to structure (interior), damage to structure (exterior), property damage (exterior), or serious traffic impacts
		Max Points	**20.00**						
2. Water Quality Improvements									
River & Groundwater Protection	3.00	5	15.00	Did the outfall rate highly in a needs analysis to identify outfalls that are most in need and best suited to water quality retrofit?	Projects that address already-prioritized drillholes and outfalls receive more points.	No, and no water quality improvement component is proposed	n/a	No, but the project would include a water quality component	Yes
Permit Compliance	1.00	5	5.00	Does the project assist in meeting WPCF or MS4 Permit requirements?	Projects that assist in meeting WPCF or MS4 Permit requirements receive more points.	No	n/a	n/a	Yes
		Max Points	**20.00**						
3. Multiple Benefits									
Increases Equitable Distribution of Public Stormwater Assets	1.00	5	5.00	Does the project provide drainage and stormwater management where public storm system is lacking OR does the project serve a location with a traditionally underserved population identified by City of Bend?	Projects that are located where City storm system is not present and that will serve populations living below the federal poverty level (by Census Block Group) or have a relatively high minority populations receive more points.	The project is in an area with public stormwater infrastructure and does not meet any of the scoring criteria for traditionally underserved populations identified at right	The project is in an area with no public stormwater infrastructure OR the project is in a Census Block Group where EITHER more than 20% of the population lives below the federal poverty level (FPL) OR is more than 15.6% minority	The project is in an area with no public stormwater infrastructure OR the project is in a Census Block Group where EITHER more than 35% of the population lives 200% below the federal poverty level (FPL) OR is more than 30% minority	The project is in an area with no public stormwater infrastructure AND the project is in a Census Block Group where EITHER more than 35% of the population lives 200% below the federal poverty level (FPL) OR is more than 30% minority
Supports Housing or Economic Development	1.00	5	5.00	Does the project support urban renewal or production of middle or affordable housing?	Projects receive more points when they are located at the intersection of more City focus areas: - Urban Renewal District - Economic Improvement District - Enterprise Zone - Opportunity Area - Potential Climate Friendly Area	None	The project will create a regional stormwater facility within one of the types of City focus areas.	The project will create a regional stormwater facility within two types of City focus areas.	The project will create a regional stormwater facility within at least three types of City focus areas.
Maintenance Safety/Access	0.50	5	2.50	Does the project improve the ease of maintenance and/or safety of staff during maintenance?	If access is increased, safety considerations are improved, or callouts for drainage concerns are reduced, project scores 5.	No change	n/a	n/a	Yes
Green Infrastructure / Ecosystem Services	0.50	5	2.50	Does the project provide additional ecosystem services through Green Infrastructure, such as vegetation and aesthetics.	Projects that are likley to include an above-ground component that is vegetated, including swales, ponds, LID planters, stormwater trees, tree canopy, and riverbank restoration receive maximum points.	No change / gray or underground solution	n/a	n/a	Green Infrastructure solution likely
System Longevity	0.50	5	2.50	Does the project rehabilitate an existing asset or improve the function or longevity of an existing asset?	Projects receive either maximum points or no points.	No	n/a	n/a	Yes
Community Partnerships	0.50	5	2.50	Will the project be developed in partnership with an organization such as Bend Park and Recreation District or Upper Deschutes Watershed Council?	Projects receive either maximum points or no points.	No	n/a	n/a	Yes
		Max Points	**20.00**						
4. Recognized Priority Projects									
Staff Priority	2.00	5	10.00	Is the project an agreed priority for City staff?	Points are awarded based on City Utilities Operations staff priorities (1-3). One point is available for Engineering and Compliance staff priorities.	No	Utilities Operations Priority 3 or Utilities Environmental Resources or Engineering priority	Utilities Operations Priority 2	Utilities Operations Priority 1
		Max Points	**10.00**						
5. Feasibility & Cost									
Complexity / Site Constraints	1.00	5	5.00	Does a physical condition such as proximity to a water well, landslide, or unfractured bedrock or need to acquire significant property mean that a solution is likely higher cost than a similar project in a less complex location?	Projects receive more points when they have less complex site conditions.	Requires significant land acquisition, or any federal or state permitting, or unusual system design, or expensive construction methods	Requires a permanent easement and local permitting only; site conditions are not well understood	Requires a permanent easement and local permitting only; site conditions are well understood and moderate impediments are present	Requires neither acquisition nor permanent easement, and site conditions are well understood with few complexities
Low Cost	1.00	5	5.00	Is the project a low-cost solution?	Projects with low initial capital costs and low ongoing maintenance costs receive maximum points. Points reduce with higher capital cost and higher ongoing maintenance cost.	It will cost more than $250,000 and is not expected to have low ongoing maintenance cost	It will cost more than $250,000 and is expected to have low ongoing maintenance cost	n/a	It will cost less than $250,000 and is expected to have low ongoing maintenance cost
		Max Points	**10.00**

INFRASTRUCTURE
Stormwater Fund

Overview

The City of Bend's stormwater system includes approximately 80 miles of stormwater pipes, 14,000 catch basins, 300 swales, and 7,600 underground injection control wells to serve 38,800 accounts. The primary responsibility of the Stormwater Program is to protect water quality and prevent flooding through the maintenance, repair, and expansion of the stormwater system in compliance with federal and state regulations. Unlike some communities, Bend's stormwater system and sewer collection systems are separate, not combined. Keeping these systems separate allows the City to more effectively manage water quality and reduce the risk of overflows during heavy rain events.

Effective stormwater management requires collaboration across various departments to ensure comprehensive planning, resource sharing, consistent enforcement, and public engagement. Stormwater activities are coordinated with the Transportation and Mobility Department, Growth Management, Planning, Engineering, and Building divisions of the Community and Economic Development Department. Illicit discharges and spill responses are managed in coordination with the Bend Police and Fire and Rescue departments.

The City maintains a 30-year stormwater rate model to project the financial needs of the Stormwater Fund while keeping rates affordable for residents and meeting regulatory and environmental commitments. This approach establishes predictable and equitable rates that reflect the full life-cycle cost of utility operations. Additionally, it balances long-term debt, capital, operations, and maintenance expenses with revenues and continues to expand and diversify customer assistance programs in support of disadvantaged households.

The City is conducting long-range master planning for the stormwater system, including a comprehensive level of service analysis to ensure the rate structure can fund long-term operational, maintenance, and capital improvement needs. The most significant challenge facing the Stormwater Fund in this budget cycle is maintaining service levels while accounting for rising inflation, increased costs, and capital project delivery schedules given the current low rates, competing resource demands across multiple City departments and the anticipated increase in projects and needs for the Stormwater Fund.

Goals & Objectives for the 2025-2027 Biennial Budget

- Complete long-range master planning efforts for the stormwater system, incorporating a comprehensive level of service analysis to ensure the rate structure is adequate to fund long-term operational, maintenance, and capital improvement costs
- Execute demonstration projects and educational outreach initiatives to pilot technologies that comply with stormwater permit requirements, including the expansion of business certification programs and the new pilot projects such as private stormwater facility maintenance assistance

- Continue to ensure the City consistently meets increasing state regulatory requirements on time and within established deadlines, including the expanding demands of the Construction Site Erosion Control and Private Stormwater Facility Inspection/Enforcement Programs
- Deliver an Integrated Stormwater Management Plan to address the needs of reissued National Pollutant Discharge Elimination System (NPDES) and Water Pollution Control Facility Underground Injection Controls (WPCF-UIC) permits
- Collaborate with regional stakeholders to develop standards and update resources that include the Central Oregon Stormwater Manual

Major Accomplishments during the 2023-2025 Biennium

- Delivered Utility Department Capital Repair and Replacement projects as planned on scope, schedule, and budget including the SE Armor Rd Pretreatment Project and Bridgeford & Textron Drive Drill Hole Pretreatment Project
- Inspected 97% of public stormwater catch basins and removed sediment and debris from 70%, ensuring system performance and reliability, resulting in 1,341 cubic yards of sediment, debris, and pollutants removed from the stormwater system
- Investigated and resolved 55 illicit discharge complaints related to potential pollutant discharges to the City stormwater system, in support of Council Goals to protect our watershed, the environment and public health
- Completed installation of the Stormwater Walking Tour adjacent to the river and along Newport Avenue, featuring stormwater systems and water quality interpretive displays, with 130 students participating in Spring 2024 as part of the new OneWater Education Program
- Promoted pollution prevention and enforcement activities that included updating erosion control codes and standards and inspected 184 active construction sites

Significant Changes from the 2023-2025 Biennial Budget

- Increase consulting efforts to update the Central Oregon Stormwater Manual, perform an environmental spill assessment, conduct water quality analysis, and carry out a systemwide assessment for underground injection control (UIC) wells
- One (1) new Vactor replacement will be purchased and utilized for routine maintenance and emergency responses within the stormwater system to remove debris, sediment, and blockages to ensure optimal functionality and compliance with environmental regulations
- Carryforward funding in the Five-Year Repair and Replacement Project Plan for the SW Knoll Stormwater Drainage Improvement Project

February XX, 2026	NS-XXX	2025 Stormwater PFP Replacing 2014 Stormwater PFP

BACKGROUND

Context

Consideration of the public and private facilities and services within the Bend Urban Growth Boundary is an important focus of the Plan. Several of these services — water, sanitary sewers, energy supplies, and communications — are the backbone needed to support and encourage urban level development. Other urban services such as refuse disposal, emergency services, and storm water disposal are also necessary parts of the mix of urban services. Although most of these facilities and services have a planning horizon greater than 20-years, they are still driven by the population and land use needs forecast in the Plan.

Goals

Adequate public facilities are the key to efficient and stable urban development. The goals below provide general guidance for maintaining and improving the level and quality of urban services as growth occurs in Bend. The citizens and elected officials strive:

- To have public and private utility systems provide adequate levels of service to the public at reasonable cost;
- For the city, county, and special districts to coordinate the provision of adequate urban services in an efficient and timely manner to support urban development;
- For new development to pay its fair share of the cost of major facilities needed to support development;
- To ensure that public services will not negatively impact the environment or the community; and
- To locate and operate public buildings and other public facilities to best serve the needs of the residents.

Overview

The Public Facilities and Services chapter describes existing facilities and utilities in Bend and also describes what city facilities are needed to meet projected growth. The ~~listing~~ descriptions of city water, ~~and~~ sewer, and stormwater projects planned for and expected over the next twenty years provides a framework for decisions on when, where, and how public facilities will be provided to support the projected growth. The city will use the listing of projects as a basis for its annual capital improvement budget.

Sewer Collection Systems Facilities

The City adopted a public facility plan for sewer collection by Ordinance No. 2111 in 2009. The plan was based on the city's 2007 Collection System Master Plan and identifies future improvements to the sewerage collection facilities required to serve long range growth in Bend. However, the city's 2009 Public Facility Plan adopted by

the City Council was never acknowledged by the state. The State did acknowledge the 2008 public facility plan for the Water Reclamation Facility, also known as the wastewater treatment plant, through Order 001795 in 2010.

In response to the 2010 UGB Expansion Remand, the City began a comprehensive planning process to update the previous Collection System Master Plan developed in 2007. This planning effort has built on information from the previous master plan, leveraged improvement concepts and utilized system information collected and analyzed in that report. The adopted and acknowledged 2014 Collection System Public Facility Plan replaces the 2009 Public Facility Plan and provides guidance and sound stewardship of the City's sewer collection system for the 2013 – 2033 planning period.

In October 2016, the Bend City Council approved a number of amendments to the Bend Comprehensive Plan, including an expansion of the Bend UGB to add 2,380 acres of land. The City Council also adopted amendments to the Comprehensive Plan and Development Code to allow more development and redevelopment in certain area within the existing UGB that are referred to in Chapter 11 as Opportunity Areas. The Oregon Department of Land Conservation and Development (DLCD) approved these plan and land use regulation amendments, including the UGB expansion, in December 2016.

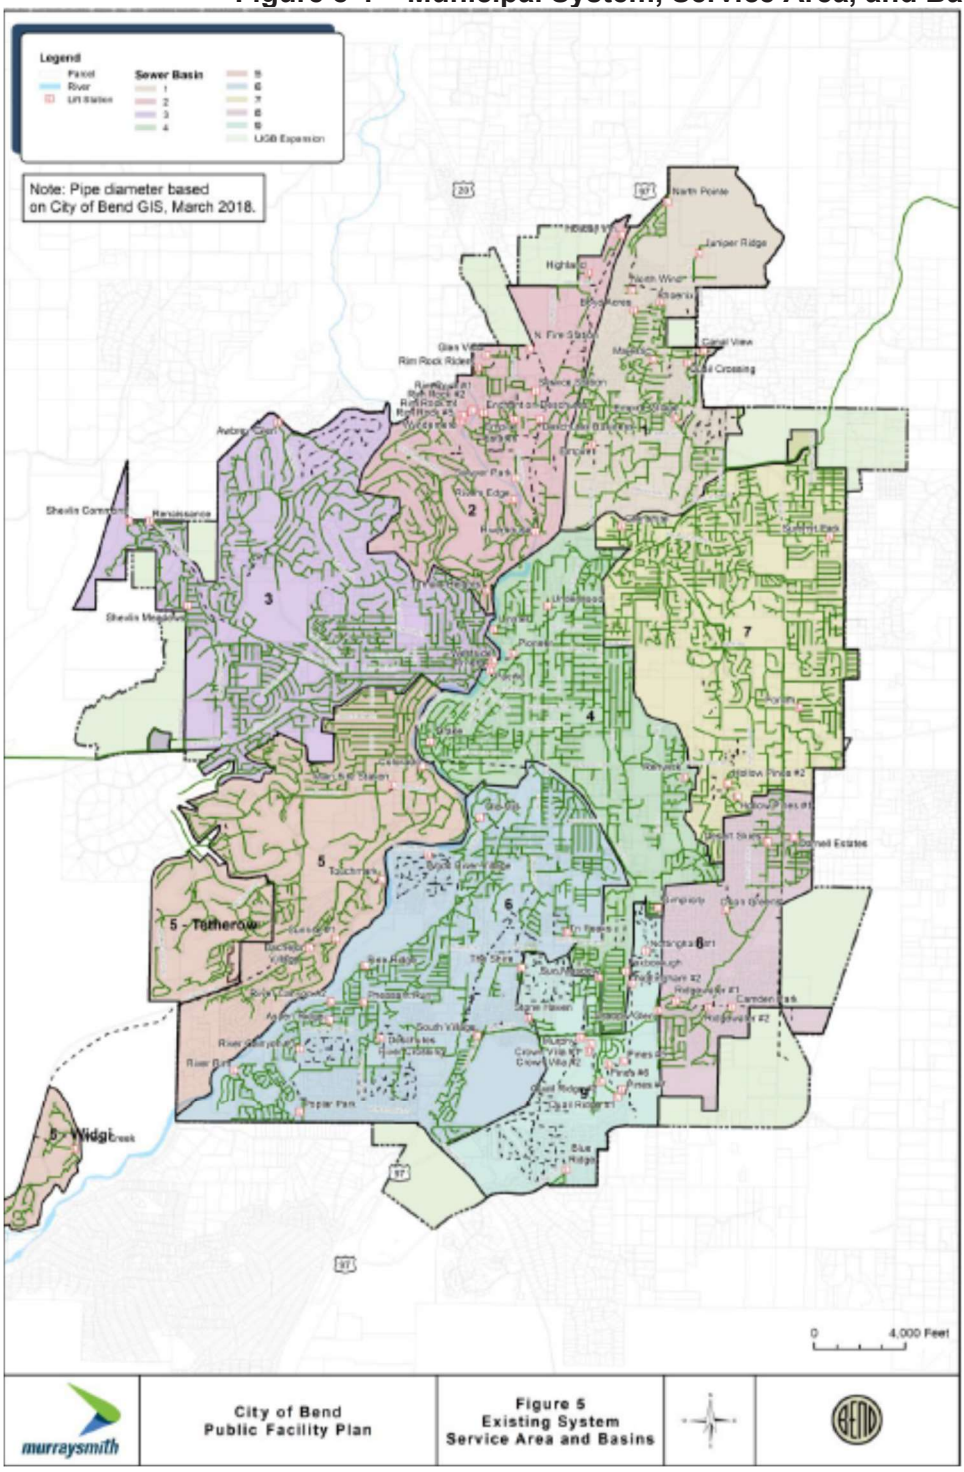
In 2017, the City began work to update the Public Facility Plan for the sewer collection system (CSPFP) to reflect those improvements that would be needed to serve the entire UGB, development in the Opportunity Areas, and those projects that were identified to serve the Expansion Areas included in the 2016 UGB expansion. This update also included making changes to two interceptor projects. These projects included the East Interceptor, a former segment of the Southeast Interceptor now identified as its own project, and the North Interceptor. The City adopted changes to the CSPFP to reflect revised alignments and pipe sizes for these projects. The City Council adopted the amended Collection System PFP in 2018 to include these projects to support development in the Opportunity Areas and the Expansion Areas.

Service Area

The collection system service area includes all areas within the city limits of Bend and the Urban Growth Boundary that are either currently served by the City's wastewater collection system or will be served by the system within the 20-year planning period. To determine the future development projections within the UGB, the City relied upon and applied the adopted Comprehensive Plan designations.

The City's Collection System Public Facility Plan separates the primary collection system into nine major sewer basins covering the approximate 37 square miles of the UGB. These nine major sewer basins are further sub-divided into several smaller sewer sub- basins for the purpose of determining flow capacity. The wastewater analysis and future forecasts consider existing customers, future customers and the conversion of septic to sewer connections within the UGB. There are currently 3,103 residential units and 158 non-residential acres that are served by a County permitted septic system within the UGB. Within the 20-year planning period it is assumed that these residential units and non- residential acres will redevelop and/or connect to the city's collection system.

Figure 8-1 – Municipal System, Service Area, and Basins



The City's primary wastewater collection system is generally comprised of manholes, gravity pipelines, City-owned lift stations and force mains that convey sewage to the wastewater reclamation facility through 249 miles of gravity pipe and 69 miles of force main and pressure sewer pipeline. Most of the gravity collection system was constructed in the late 1970's, when the City received federal funding to construct a centralized wastewater treatment plant. The City completed its sewerage collection system and treatment plant in 1983. Since that time a number of upgrades have occurred in both the plant and collection system. The wastewater treatment plant has capacity for an average flow of approximately seven million gallons a day. Table 8-1 charts the average daily flows at the wastewater treatment plant and shows a gradual increase of the average daily flow. The flow data includes seasonal wet weather events.

Table 8-1
Annual Average Flow from Historical Records at the WRF

Year Average Daily Flow	Year Average Daily Flow
2007	5.41
2008	7.22
2009	5.6
2010	5.5
2011	5.3
2012	5.4
2013	5.91

Notes:
1) 2007 and 2013 average calculated from flow meter data (2-month period).
2) Suspected error in inflow data at the WWTP. Inflow meter was recalibrated after 7/20/2009.

The master plan for the wastewater reclamation facility (WRF) was completed in 2008 by Carollo Engineering. The plan for the WRF was submitted to the Department of Land Conservation and Development in 2009. The Land Conservation and Development Commission (LCDC) acknowledged the 2008 plan for the WRF through Order 001795 in November 2010. The WRF Master Plan identifies short term and long term capacity improvements that will enable the City of Bend to minimize expansion costs by fully utilizing the existing facilities. The 2014 Collection System Public Facilities Plan proposes improvements to increase the capacity of the collection system to 11.9 MGD within the 20- year planning period. The design of the WRF was completed in 2012, with construction beginning in the summer 2013. The City expects the WRF expansion to be completed by 2019. The 2018 CSPFP includes improvements necessary to serve the entire UGB, including specific improvements necessary to provide wastewater collection to the areas added to the UGB in 2016.

Optimization

The City utilized an optimization process to determine the combination of system improvements that would satisfy hydraulic performance criteria and minimize overall life- cycle costs. The optimization model enables an exhaustive and objective evaluation of feasible collection system improvement alternatives. The optimization software, Optimizer WCSTM, is a decision-support software program that integrates improvement alternatives, comprehensive life-cycle costs, design criteria and the calibrated hydraulic model of the collection system. In a single optimization analysis, the software evaluates over 100,000 possible solution configurations and assesses life-cycle cost and hydraulic

performance simultaneously while sizing system improvements. Over the course of this project, over one hundred individual optimization runs were completed, representing a total analysis of more than 10 million trial solutions.

The optimization process identified short-term and long-term capacity upgrade projects to be phased over the 20-year planning period.

Capital Improvement Program
The Capital Improvement Program (CIP) describes proposed improvements that are required in both the short-term (1-5 year), mid-term (6 to 10 years) and long-term (11 to 20 years) to provide reliable sewer collection throughout the City's current UGB.

The 2018 update to the CSPFP organized improvement projects by whether they were:

- Short Term (1 to 5 years);
- Short to Mid Term Projects (Development Driven and needed 1 to 5 or 6 to 10 years),
- Mid to Long Term (Development Driven and 6 to 10 or 11 to 20 years).
- Expansion Area Service (Development Driven)

For consistency with Goal 11 and its administrative rule, projects needed between 1 to 5 years are considered short term, and projects needed between 6 years and the remainder of the planning period are considered long term.

Projects were further organized in the following categories:

1. Trunk Sewer and Interceptor Improvements
2. Southeast Lift Station Condition and Decommissioning Improvements
3. South Lift Station Capacity and Condition Improvements impacting the Amethyst/Mahogany/3rd Street Trunk Sewer
4. Other South and East Area Lift Station Improvements
5. Central Area Lift Station Capacity and Condition Improvements
6. West Lift Station Capacity and Condition Improvements impacting the Newport Avenue Trunk Sewer
7. North Lift Station Condition and Decommissioning Improvements
8. Other North Area Lift Station and Condition Improvements
9. Programmatic Funding
10. Expansion Area Infrastructure

The final category of improvements refers to those needed to serve development and land uses in several of the UGB expansion Areas. The following organization of projects into short-term, short to mid-term, and mid to long term reflects the presentation in the 2018 CSPFP. Figure 8-2 provides a map that identifies the locations of these key projects. The 2018 CSPFP provides a written description for each project as well.

Short Term Projects. The major projects recommended in the 1 to 5-year timeframe include:

1. North Interceptor Phase 1
2. Southeast Interceptor Extension and Diversion
3. Southeast Lift Station Decommissioning
4. Drake Lift Station and Force Main

Short to Mid-Term Projects (Development Driven). These projects are driven by development location and timing, and are identified as needed between the short-term (1 to 5 years) and mid-term (6 go 10 years).

1. Amethyst/Mahogany/3rd Street Trunk
2. River Rim Lift Station
3. 8th to 15th Street Trunk
4. Newport Trunk, Shevlin Commons Lift Station, Shevlin Meadows Lift Station and Force main, and Renaissance Lift Station
5. Deschutes Business Lift Station
6. North Interceptor Phase 2
7. North Area Lift Station Decommissioning
8. North Interceptor Phase 3
9. Old Mill Lift Station and Force main
10. East Interceptor Phase 1

Mid to Long Term Projects (Development Driven). The following projects are also development driven and identified as needed in the mid (6 to 10 years) to long term (11 to 20).

1. Drake Downstream Trunk
2. Central Interceptor
3. East Interceptor Phase 2

Expansion Area Service. The final list of projects is those intended to support development in several of the UGB Expansion Areas. The 2018 CSPFP identifies several large projects, such as the North Interceptor Phases 2 and 3, and East Interceptor Phases 1 and 2, that are needed for both UGB Expansion Areas and for accommodating wastewater flows to the WRF. This list of projects is specific to several UGB Expansion Areas and will likely be needed in the Short Term (1 to 5 years).

1. Elbow Gravity Trunk
2. Elbow Lift Station and Force main
3. DSL Gravity Trunk
4. Thumb Gravity Trunks
5. West Gravity Trunks

Table 8-2 presents the capital improvement program cost summary in 2017 dollars by project category.

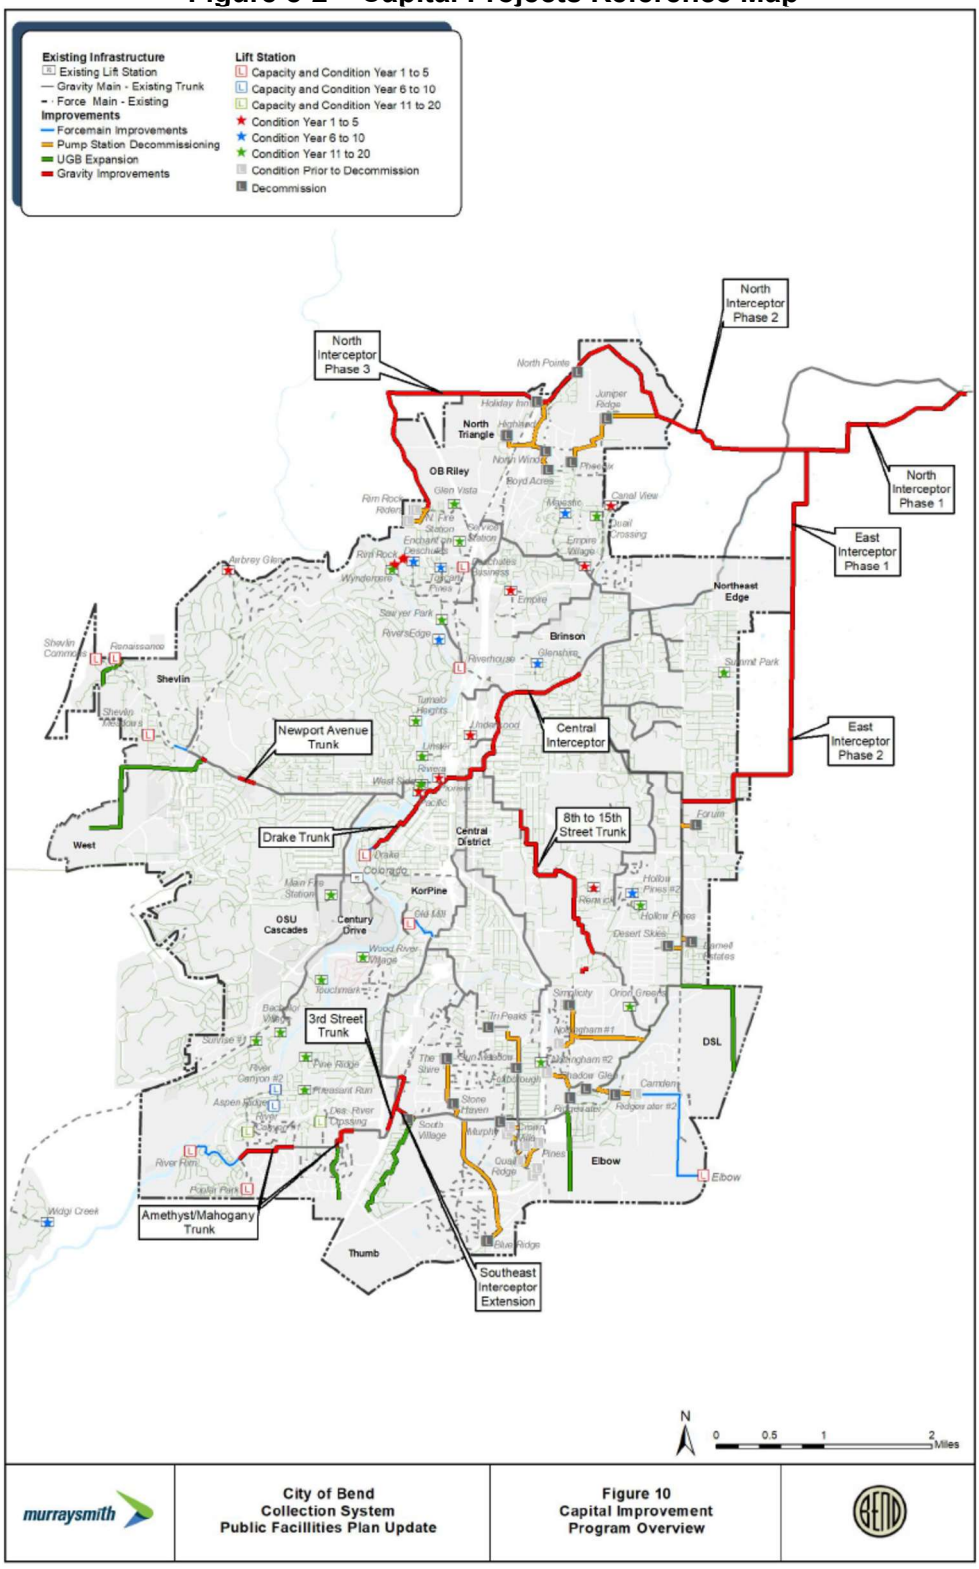
Table 8-2
Capital Improvement Program Cost Summary

Improvement Category	Year 1 to 5	Year 6 to 10	Year 11 to 20	Total
Trunk Sewers and Interceptors	$33.1	$55.1	$29.9	**$118.1**
Southeast Lift Stations Condition and Decommissioning	$12.8	$0.6	$2.0	**$15.4**
South Lift Stations Impacting Amethyst/Mahogany/3rd Street Trunk Sewer	$2.0	$2.1	$0.8	**$4.9**
Other South and East Area Lift Station Condition Improvements	$0.4	$1.2	$4.0	**$5.6**
Central Area Lift Station Capacity and Condition Improvements	$7.7	$0.8	$2.8	**$11.3**
West Area Lift Stations Impacting Newport Ave Trunk Sewer	$2.5	$0.0	$0.1	**$2.6**
North Area Lift Stations Condition and Decommissioning	$0.0	$6.4	$2.0	**$8.4**
Other North Area Lift Station Capacity and Condition Improvements	$1.5	$0.8	$1.3	**$3.6**
Programmatic Funding	$20.1	$14.1	$47.7	**$81.9**
Expansion Area Infrastructure	$18.7	$4.3	$0.0	**$23.0**
Total	**$98.8**	**$85.4**	**$90.6**	**$274.8**

Notes:
1. All costs shown in millions and are Class 5 budget estimates established by the American Association of Cost Engineers.

The actual project costs will likely vary from the estimates presented. In addition, the project estimates will change over time due to fluctuations in actual labor and material costs, competitive market conditions, site conditions, final project scope, implementation schedule, continuity of personnel, and other unforeseeable factors. Because of these factors, project feasibility, benefit-to-cost ratios, risks and funding must be carefully reviewed prior to making specific financial decisions or establishing project specific budgets. The projects listed above as short term, short to mid-term, and mid to long-term are reflected in the following map identified as Figure 8-2. This figure also shows the location of the Expansion Area Projects.

Figure 8-2 – Capital Projects Reference Map



Sewer Collection System Financial Strategy
The City's financial strategy for the collection system considers the current and future financial obligations of the utility, operation and maintenance needs, fiscal policy achievement and the ability to support the completion of the capital projects identified in this CSMP update.

The overall goal of the financial plan is to have the annual water reclamation utility total resources (rates and fees) set at a sufficient level to meet annual uses (operations, maintenance, debt service, capital costs and fiscal policy achievement) to ensure a self-supported utility. The primary source of funding for the utility is derived from ongoing monthly charges for service, with additional revenue coming from miscellaneous fees/charges, interest income and system development charges (SDCs). The City Council controls and approves the level of user charges as needed to meet financial objectives. The financial plan considers the total system costs of providing water reclamation services, both operating and capital. The following elements were completed as part of the financial plan:

Capital Funding Plan. Identifies the total Capital Improvement Plan (CIP) funding obligations of the planning period. The plan defines a strategy for funding the CIP including an analysis of available resources from rate revenues, existing reserves, system development charges, debt financing, and any special resources that may be readily available (e.g., grants, developer contributions, public private partnerships, etc.). The capital funding plan impacts the financial plan through the use of debt financing (resulting in annual debt service) and the assumed rate revenue available for capital funding.

Operating Forecast. Identifies future annual non-capital costs associated with the operating, maintenance, and administration of the water reclamation system. Included in the financial plan is a reserve analysis that forecasts cash flow and fund balance activity along with testing for satisfaction of actual or recommended minimum fund balance policies. The financial plan ultimately evaluates the sufficiency of utility revenues in meeting all obligations, including cash uses such as operating expenses, debt service, capital outlays, and reserve contributions, as well as any debt service coverage requirements associated with long-term debt. The plan also identifies the future adjustments required to fully fund all utility obligations in the projection period.

Sewer Rates. The City Council approved the FY 2017-18 Resolution No. 3077 on June 21, 2017. This resolution included a change to the monthly sewer rate as follows:

- Single family residential base charge - $34.55:
- Multi-family residential base charge - $13.65:
- Non-residential standard base charge - $34.55.

For each of these categories of sewer rate charge, there is also a volume charge of $3.62 per 100 cubic feet of winter quarter average (WQA) water usage. In addition, the City Council has also implemented an extra strength charge (ESC) that will be phased in over four years, with the 2017-2018 representing the 2nd year of this phase in.

The financial plan indicates that rate increases of approximately 6% per year will be needed through FY 2021 to meet current water reclamation utility rate revenue requirements. Annual inflationary rate increases are anticipated for the remainder of the 20-year financial planning horizon. Actual rate increases may vary depending on timing and costs of projects. This projection assumes that the customer base grows by 1.4% per year.

System Development Charges. SDCs are one-time fees imposed on new and increased development to recover the cost of system facilities needed to serve that growth. An SDC can include two major components:

- A reimbursement fee that reflects the cost of existing infrastructure with capacity that is available to serve growth
- An improvement fee that reflects the portion of the cost of future projects that is attributable to providing capacity for growth.

The financial plan includes the City's sewer SDC, and at its current rate of $4,655 per equivalent dwelling unit. The FCS Group completed the latest Sewer SDC study for the City in June 2015. This SDC study incorporated information from the 2014 CSMP and SPFP to support the calculation of the Sewer SDC of $4,655. The City Council approved the increase in the Sewer SDC to this amount in Resolution 3077 on June 21, 2017. .

Water Facilities and Systems

The quality of water in the Bend urban growth boundary is a matter of major importance. Not only is water necessary for the needs of residential, commercial, and industrial users, but it supports many of the recreational and scenic opportunities that make the Bend area a desirable place to live.

In 2013, the City Council adopted the 2013 Water Public Facility Plan (WPFP) The Council adopted this version of the WPFP through Ordinance No. 2194, after a previous version of the WPFP was remanded from the Oregon Land Use Board of Appeals (LUBA) (See LUBA No. 2012-043). This 2013 WPFP was subsequently appealed to, and later affirmed by LUBA in September 2013 (See LUBA No. 2013-037).

Between 2019 and 2021, the City engaged a project team to develop an Integrated Water System Master Plan (iWSMP). This integrated plan included: 1) an updated Water System Master Plan for the City of Bend water utility; 2) a Water Management and Conservation Plan to maintain the City's water rights with the Oregon Water Resources Department, and; 3) a Goal 11 Water Public Facility Plan. The 2021 Water PFP replaces the 2013 Water PFP as Appendix G to the Bend Comprehensive Plan. The 2021 Water PFP will serve as the Goal 11 public facility plan for water in the Bend UGB, and identifies the capital improvements needed to serve the existing and planned land uses within Bend's UGB.

The final Integrated Water System Master Plan (2021) provides the factual base on the City's current and future water facilities and infrastructure for the 2021 Water Public Facility Plan. This final document includes the required inventory and general assessment of the City's water facilities and systems. The iWSMP also includes information and documentation of the City's water rights and supply, including

consideration of factors that will influence both surface and groundwater supplies such as droughts, forest fires, and extreme weather patterns caused by climate change. The 2021 Water PFP also relies on planning documents and data for the water facilities and infrastructure of the Avion Water Company and Roats Water System.

Municipal System

The City of Bend is one of three water suppliers within the UGB. The city's water system in 2021 included about 25,500 service connections. Since 1926, the City of Bend's primary source of water has been from the Bend Municipal Watershed. This water originates on the eastern slopes of Ball Butte and Broken Top Mountain about 20 miles west of Bend in a protected watershed area, which lies within the Deschutes National Forest.

The Bend Municipal Watershed has excellent water quality, considering both chemical and bacteriological quality with only chlorination treatment. The water is a consistent 48°F winter and summer, and is clear with the exception of slight turbidity during period of high runoff from the watershed. These periods occur only occasionally, and last only a few days. The 1986 Safe Drinking Water Act required that all surface water systems in the nation provide filtration which the City added to comply with these rules in 2016. The Bend Municipal source can deliver up to 11.6 million gallons per day per USFS Special Use permit and City Ordinance (limits diversion to 18.2 cfs). The City supplements the surface water supply with groundwater from the Deschutes Regional Aquifer.

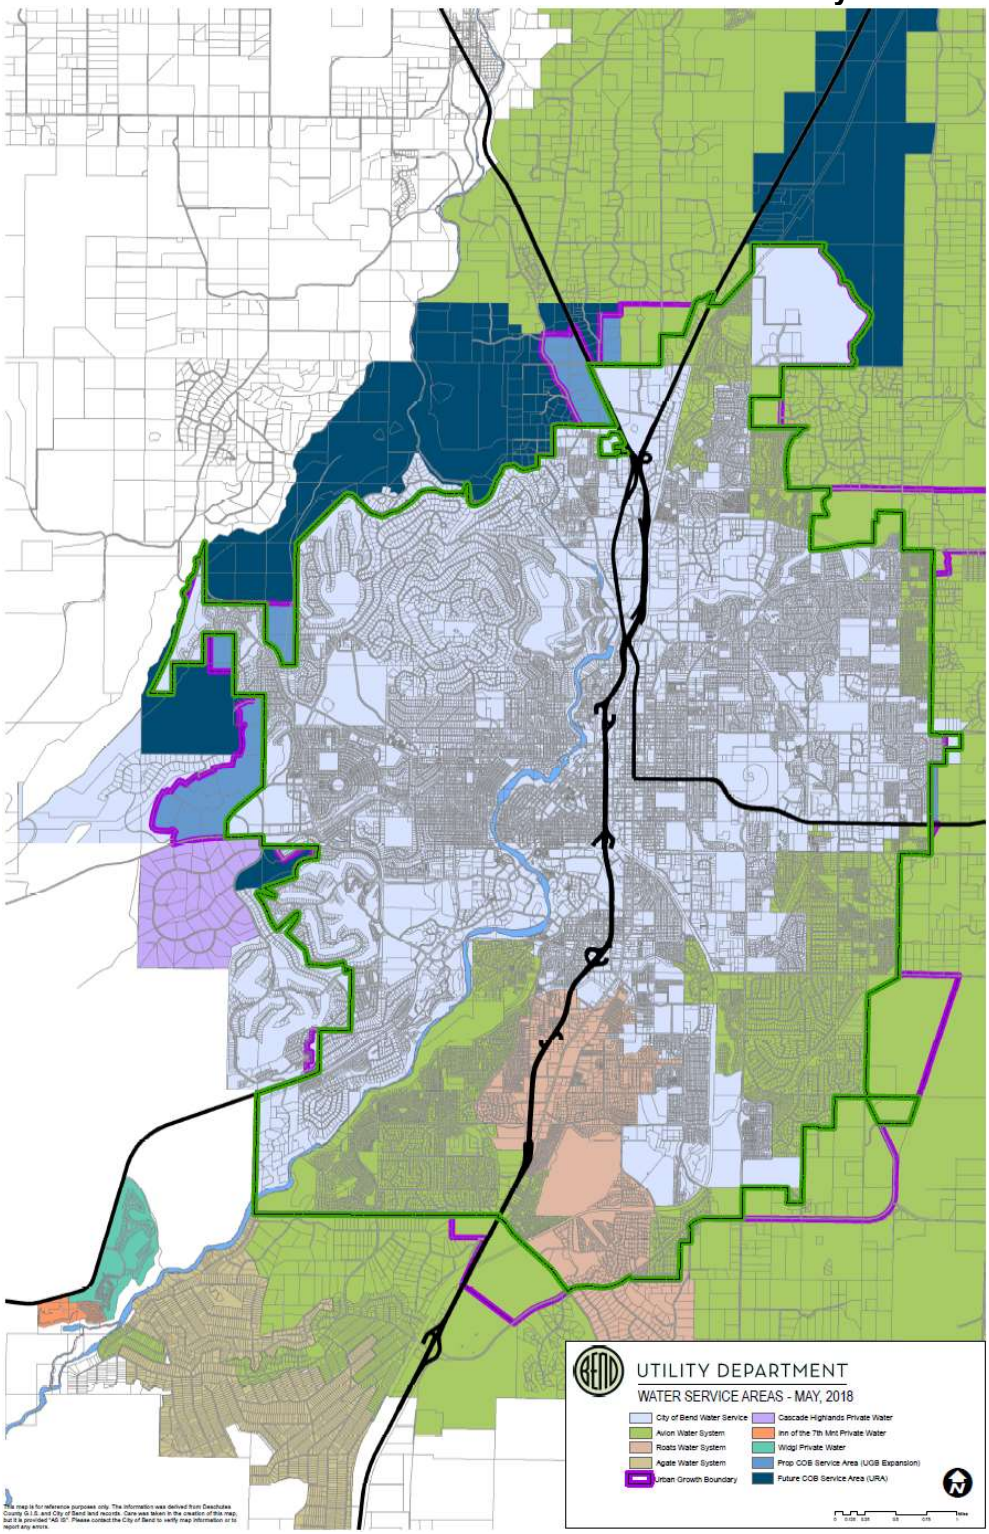
The 2021 Water PFP includes tabular and narrative data that describes the City's existing water system, its components and their existing condition, and annual water use. The City's existing water system consists of the surface water intake facility, a water filtration facility (WFF), 8 groundwater facilities consisting of 20 active wells, 15 finished water storage reservoirs, 6 active booster pump stations, approximately 440 miles of transmission and distribution mains, nearly 10 miles of raw water pipeline, and associated appurtenances including various valves, hydrants, and meters. The system includes six primary pressure zones with an additional twenty-three subzones.

The city water system historically provided metered service for industrial, commercial, and multifamily developments. However, the city was one of the last major water systems in the state to use flat rate (non-metered) billing for residential service connections. As of December 2004, the City has become fully metered for all customers. This included conversion to automated meter reading technology, as well as installation of premise isolation cross connection protection at every service connection as part of our Safe Drinking Water Program. In 2021, the City updated its required Water Management and Conservation Plan (WMCP) which outlines various conservation related benchmarks, in order to meet conditions by the Oregon Water Resources Department as part of obtaining new and maintaining existing water rights to meet the needs of growth.

The city's 2021 Water PFP identifies water supply, transmission, and storage needs throughout the city's service territory within the UGB. This 2021 Water PFP also includes this information for the respective services areas of the Avion Water Company

and Roats Water Company. Additional wells, reservoirs, main transmission lines, and smaller distribution lines will be needed to meet the projected urban area growth.

Figure 8-3
Water Utilities in the Bend Urban Growth Boundary



Capital Improvement Program

The 2021 Water PFP includes those capital improvements identified by the City's project team, and the Avion and Roats water Companies. The Water PFP includes the city's detailed CIP for three time periods: (1) 2021-2030; (2) 2031-2040, and; (3) beyond the year 2040 and beyond. The following table summarizes the CIP projects for the City's water utility by project category for each of these time periods. For the purpose of complying with Statewide Planning Goal 11, Public Facilities and Services, all projects identified in the 2021 Water PFP for the City's utility are considered long term projects. Once this PFP has been adopted by City Council, project staff will identify those projects to recommend to City Council in the 2022-2026 Capital Improvement Program budget for the City as short-term projects.

Table 8-3
City Capital Improvement Program by Project Category and Time Period

Project Category	2021-2030	2031-2040	Beyond 2040	Total Estimated Cost
Capacity	$41 M	$47 M	$62 M	$150 M
Condition	$68 M	$87 M	$50 M	$205 M
Other	$24 M	$3 M	$9 M	$36 M
Totals	$133 M	$137 M	$121 M	$391 M

Private Providers
Currently, the City of Bend serves water to approximately 75% of the customers within the UGB. There are two private utilities supplying domestic water to the majority of the remaining customers. Approximately 9,200 service connections within the UGB are furnished domestic water through private water systems. Figure 8-3 shows the extent of both the city's service area (blue) and the private providers; Avion ((orange or pink) and Roats (green). The City has entered into franchise agreements with Avion Water (See Ordinance NS-1514, as amended) and Roats Water Company (See Ordinance NS-1747) through which the City has agreed to Avion Water Company and Roats Water Company providing water to its customers in the city's boundary. Both franchise agreements have been incorporated into the city's Municipal Code under Chapter 11, Franchises.

Water System Financing
The 2021 Water Public Facility Plan lists the various water improvement projects the city plans to construct through the year 2040 to support the projected growth and planned land uses in the Bend UGB. The description, location, timing and estimated cost of listed facilities may change as a result of subsequent design studies, capital improvement programs, environmental studies, and changes in funding sources. City water utility facilities may be constructed earlier than planned by an owner/developer choosing to develop an area prior to the scheduled extension or expansion of facilities by the city.

The city has adopted System Development Charges (SDCs), as allowed under state law, to help pay for new facilities. SDCs are one-time fees imposed on new and increased development to recover the cost of system facilities needed to serve that growth. Like those collected for the sewer system, water SDCs can have two major components; a reimbursement fee that reflects the cost of existing infrastructure with capacity that is available to serve growth, and; an improvement fee that reflects the portion of the cost of future projects that is attributable to providing capacity for growth. These fees are earmarked for major system improvements identified in the City's 2021 Water PFP such as reservoirs, wells, transmission lines, and treatment facilities. For fiscal year 2021-2023, , the water System Development Charge is 100 percent of the allowable maximum charge. The 2021-2023 Water SDC is $5,857 per equivalent dwelling unit (EDU). The City Council determined that this rate reflects the proportionate share of system improvement costs that can be attributed to new growth.

The remaining share of system improvement costs benefit the whole community and are collected as a part of the monthly user fees. For Residential and Non-residential customers inside the city limits, water utility rates are based on meter size plus a rate of $2.02 per 100 cubic feet for all other water uses. Residential and Non-residential water utility customers outside of the City limits pay higher per meter size rates and higher per cubic foot rates.

The 2021 Water Public Facility Plan summarizes the funding mechanisms that Avion Water Company and Roats Water System use to fund the operation and improvements of their respective water utilities.

Storm Drainage Facilities and Systems

For many years, the City of Bend's drainage system has depended primarily on underground injection (dry wells and drill holes) to discharge stormwater into the fractured volcanic rock that underlies much of the City. Dry wells do not work well in areas underlain by layers of impermeable material unless those layers are penetrated. Drill holes are an alternative to dry wells, intended to penetrate impermeable layers to reach more permeable material beneath them.

Bend does not have a city-wide system of pipes collecting and transporting stormwater for treatment. The lack of defined drainage ways, the expense of digging in rock, and the difficult topography have limited the installation of piping. The 2025 existing piped system to the Deschutes River is limited to about 7~~14~~ miles of pipe and 36~~28~~ river outfalls. There are approximately 7,000~~4,600~~ dry wells and 1,000 drill holes on public property in the City and an unknown number on private property. Including interconnections between inlets and Underground Injection Control (UICs), there are 80~~47~~ miles of pipe total throughout the City.

Water Quality and Stormwater Management

A large part of Bend's drinking water comes from a deep, very high-quality and abundant aquifer beneath the City that is fed by snow melt high in the Cascade Mountains. The City and its residents are committed to protecting this valuable resource along with protecting surface water quality. Protection of all groundwater including perched water and seasonal high groundwater is required by the State of Oregon. The City has two stormwater permits from the Oregon Department of Environmental Quality to discharge stormwater runoff to surface water and groundwater. To comply with the regulations ~~for both stormwater and groundwater~~of both permits, the City prepared an Integrated Stormwater Management Plan (ISWMP). The ISWMP is a living document that is updated as necessary to meet requirements of the permits and the needs of the City.

The ISWMP outlines a comprehensive program to protect the quality of the Deschutes River and the City's groundwater. The ISWMP identifies ~~a number of~~ control measures ~~BMPs~~ for preventing pollutants from entering stormwater or removing them before the water is discharged to the river or ~~underground~~groundwater. The following ~~BMPs~~control measures are required elements of the Phase II (surface water) program and ISWMP:

- Public Education and Outreach
- Public Involvement and Participation
- Illicit Discharge Detection and Elimination
- Construction Site ~~Stormwater Management Activities~~Runoff Control
- Post-Construction ~~Stormwater Management in~~Site Runoff for New Development and Redevelop~~ed Areas~~ment
- Pollution Prevention ~~/~~and Good Housekeeping for Municipal Operations

Bend's ISWMP also addresses stormwater monitoring and has control measures~~BMPs~~ focused on protecting drinking water sources as required by the UIC permit. To address stormwater issues arising from increasing density of development, the Stormwater

Master Plan (SMP) explores how the City could enforce stormwater standards and allow greater flexibility for centralizing stormwater management facilities.
~~provisions to meet UIC requirements.~~

In August 2014 the City adopted its first Stormwater Master Plan (SMP). The City ~~is in the process of finishing an update to the 2014 SMP, and~~ anticipates adoption of the SMP update by City Council in early 2026. The City relied on these documents and prior planning documents to develop a Goal 11 stormwater public facility plan (PFP) for the existing Bend UGB, first adopted in 2014, and replaced with a new PFP in 2025. This 2014 2025 Stormwater PFP is incorporated as the Goal 11 public facility plan for stormwater and provides a stormwater management strategy and identifies the capital improvements needed to serve the existing and future development within Bend's UGB.

Stormwater Funding Strategy

In 2007 the Bend City Council established a Stormwater Utility Fee for the sole purpose of funding Stormwater infrastructure projects and programs. As of July 1, 2025, the stormwater utility fee is $8.16 per Equivalent Residential Unit (ERU) ~~ERU~~. The service charge pays for a comprehensive stormwater program including operation and maintenance of stormwater facilities, engineering and project management, water quality management, utility administration, and public response, as well as capital improvement projects ~~The SMP provides a cost strategy.~~ The proposed stormwater public improvements from the 2026 Stormwater Master Plan Update and 2025 Stormwater PFP have a 20-year capital cost of roughly $81.525.2 Million to address drainage issues, protect groundwater and surface water quality, and meet permit requirements for operating storm sewers and UICs.

The costs of day-to-day stormwater operations and regulation of stormwater systems on private property have not been estimated as part of the ~~Stormwater Master Plan~~SMP or 2025 PFP; however, budgets for system operations, maintenance, and regulation can be expected to grow with increasing inventory of storm system assets, increasing growth in private development, and increasing regulation of the City. ~~As of July 1, 2025, the stormwater utility fee is $8.16 per ERU. The service charge pays for a comprehensive stormwater program including operation and maintenance of stormwater facilities, engineering and project management, water quality management, utility administration and public response, as well as capital improvement projects~~ ~~Utility operating revenue needs were modeled to range from $2.5 Million/year at present to $5.4 $5.6 Million/year by FY2032-33 depending on the rate assessment approach taken. Monthly stormwater utility rate increases were estimated in two ways: a gradual rate increase and an accelerated rate increase. The immediate calculated monthly stormwater utility rates were modeled to be between $4.36 and $5.80 per ERU and the FY 2032-33 monthly stormwater utility rates would be anticipated between $6.53 and $6.80 per ERU depending on the rate adjustment approach taken. Below is the City's 2013-2014 Stormwater Budget.~~

Solid Waste Disposal

Solid waste disposal for the urban area occurs at one county facility, the Knott Pit Sanitary Landfill, just outside of the Urban Growth Boundary on the east side of 27th Street. Deschutes County studies estimate that Knott Landfill will reach capacity by the year 2025. However, the recent trend of 10 to 18 percent annual increases in municipal solid waste flows may shorten that life span.

A second landfill just for construction debris and demolition material located adjacent to Simpson Avenue within the Urban Growth Boundary was in operation prior to 1997. This demolition landfill site is about 80 acres, and abuts residential lands on the north, and west, and commercial development along its east and south sides.

Collection of solid waste is done by private providers under city and county franchise. In 2005 it was estimated that only about 92 percent of the households in the Bend Urban Growth Boundary had signed up for a weekly collection service. The two garbage haulers in the Bend urban area, Bend Garbage and Cascade Disposal, provide weekly curb-side pickup of municipal solid waste and recyclable materials. Recyclables picked up at curb-side include aluminum, corrugated cardboard, paper bags, magazines and catalogs, and used motor oil.

The Department of Environmental Quality's 2005 Waste Diversion Report indicated that 160,707 tons of waste were deposited in Knott Landfill and 62,523 tons of waste were "diverted" (recycled by households and businesses either through curb-side service, or dropped off at the county's yard debris mulch program, as well as recycling occurring out of the solid waste system such as bottle bill returns and the scrap metal industry). When backyard composting and efforts in waste prevention and reuse are considered, the percentage of solid waste material being recycled increases from approximately 28 percent to approximately 34 percent.

Other Urban Utilities

Electricity within the urban area is provided by Pacific Power and Central Electric Cooperative. Cascade Natural Gas Company provides natural gas service to most parts of the urban area. Adequate electric natural gas resources exist to serve the Bend urban area through the planning period.

Local (land-line) telecommunication services are provided by Qwest. Many private companies compete to provide long distance and cellular phone service. Cable television service within the urban area is provided by Bendbroadband, which also provides phone and high-speed internet service. Private utility providers within the city limits operate under non-exclusive franchise agreements with the city.

Public Buildings and Facilities

Downtown Facilities

The Bend City Hall at the south end of downtown was built in 1989 and expanded in 1992. City Hall comprises an area of approximately 26,000 square feet. Also located at the south end of downtown are the Bend-La Pine School District Administrative offices, the Deschutes County historical museum, the Bend Public library, and other public buildings.

The County courthouse and various County offices are located in several buildings at the north end of the downtown area. A new 80,000 square foot administration building was constructed in 2004. Half of this facility is leased to the State Department of Human Services and Department of Justice.

The Bend Park and Recreation District offices are located between the Old Mill District and the Deschutes River.

Fire Department Facilities

The Bend Fire Department serves the city, the urban area, and some areas beyond the Urban Growth Boundary through the Rural Fire District service contract. The Bend Fire Department covers approximately 164 square miles for fire protection and 1,450 square miles for ambulance operations. The "Main Station" (Old Station 301) was built in 1920 and was located downtown at 5 NW Minnesota Avenue. After serving the Bend Fire Department as the main station and the administrative office for 80 years, the department moved out of the station in 2000 to its new location at 1212 SW Simpson Avenue in order to provide better, faster coverage for the community. Old Station 301 was remodeled and became a mixed-use facility including dining, retail, office and residential spaces. The Fire Administration Building at 1212 SW Simpson Avenue was constructed in 2000. It houses the department administrative, prevention and support staff. The "West Station" (Station 301) is also located at 1212 SW Simpson Avenue, on the west side of Bend near Century Drive. The station is 12,000 square feet in size and was built for a cost of $1.6 million in 2000. The "Tumalo Station" (Station 302) is located at 19850 4th Street in the unincorporated community of Tumalo, between Bend and Sisters. The station was built in the early 1970s. The "South Station" (Station 303) at 61080 County Club Drive was also built in 2000. The "East Station" (Station 304) at 62420 Hamby Road was built in 2003 and is the newest station. The "North Station" (Station 305) at 63377 Jamison Street was built in 2000 and is located on a seven-acre parcel next to the Deschutes County Sheriff's Office. Located behind Station 305, the department Training Center includes a five-story tower with attached garage, numerous training props, and a driver training area. The Training Center also features a classroom and training office building located near the tower. The Fire Department is planning on building a "Central Station" on the Pilot Butte City Campus within the next ten years in order to better serve the rapidly growing central- east section of Bend.

Law Enforcement Facilities

Law Enforcement services in the urban area are provided by the City of Bend Police Department and the Deschutes County Sheriff's Department. The Oregon State Police regional headquarters is also located in Bend. The City of Bend Police Department was located in City Hall until 2002, when a new 27,000 square foot building was constructed at the intersection of 15th Street and US Highway 20 to better accommodate and headquarter all police business. As with all other departments at the City, faster than anticipated growth has created a need for additional staff to serve the community and this has, in turn, created the need for additional space. As a result, the Police Building was expanded to include another 19,000 square feet, and also houses the Bend Municipal Court.

In 1997, Deschutes County constructed a new public safety complex off of Highway 20. Within this complex there is a 228-bed adult jail, the Sheriff's Office, the Adult Parole and Probation offices and transitional housing. The County also constructed the Health and Human Services building off 27th Street on the east side of Bend. This building provides space for the County's Mental Health and Health Departments.

Public Works Facilities
The City's Public Works Facilities are located in three primary areas: The Pilot Butte Campus Site, which is located west of 15th Street between Highway 20 and Bear Creek Road, the Boyd Acres offices, and the Water Reclamation site, which is located northwest of the Bend Airport on McGrath Road. Numerous additional satellite facilities that house vehicles, utility equipment or materials are located throughout the service area.

The Pilot Butte City Campus site houses Public Works administration and all departmental divisions except Water Reclamation. City Council authorized a substantial master planning effort for this site in 2006 in order to determine space needs for the next twenty years for the Public Works, Police, Community Development and Fire Departments, all of whom will have facilities on the site.

The existing main Public Works building houses Public Works administration and provides crew spaces for the Street and Water Divisions. This 41,000 square foot building will likely undergo significant, phased-in changes in the next seven years in order to bring the building into Code and ADA compliance as well as provide for the anticipated 20 year needs of the department.

A facility to house Public Transportation operations was constructed, at the southwest corner of the Pilot Butte Campus site. The construction was largely funded through a $4 million *ConnectOregon* grant, and includes a 5,500 square foot transit operations office, five vehicle maintenance bays and space for transit vehicle parking. The City's public transit program is operated by Cascade East Transit through Central Oregon Intergovernmental Council. The transfer of this program to COIC began in 2010 and was completed in 2011.

The Water Reclamation facility is located outside of the UGB on 1,600 acres northeast of Bend and includes eight main structures. A new Headworks building was constructed in 2008. This facility will be heated by hot water that is heated by methane gas captured from the waste products entering the facility. New facilities completed within the last five years include a new training building, a Level IV filtration facility and a new digester. The new facilities plan for the plant was completed in 2008, and acknowledged by the Land Conservation and Development in 2010. This plan provides for an expansion and upgrade plan for water reclamation to serve the City up to the year 2030.

The Bend Airport
The Bend Municipal Airport is located on 415 acres situated five miles east of the city limits of Bend. Owned by the City of Bend, the airport is located in Deschutes County and is currently outside the Bend Urban Growth Boundary. Airport facilities consist of a single instrument capable runway, 5005 feet in length, a full parallel taxiway, more than 60 hangar and industrial buildings, and parking facilities for aircraft and vehicles. The Bend Municipal Airport is identified by the Oregon Department of Aviation as a Category 2, High Activity Business/General Aviation airport, with approximately 200 based aircraft and an estimated 42,000 operations in 2005.

Over the past few years, demand at the Bend Airport has increased significantly. Continued business expansion by the existing tenants, the addition of Epic Aircraft in 2005, and continued growth and demand has wrought a dramatic increase in activity at

the Airport. The corresponding demand for new services and facilities provides challenges to current funding levels.

Current improvements to the Airport infrastructure include the relocation of the single runway at the Airport to meet federal design standards and provide an adequate surface for the existing aircraft fleet mix. This project, beginning in 2007, is scheduled for completion in 2008. Following the runway relocation project, development of an eastside parallel taxiway will be planned for construction in 2009, with completion scheduled for the same year. At this time, it is anticipated that a new Airport Master Plan to clarify the future direction of the Airport and to meet future user needs will be initiated.

Policies

Sewer Collection Facilities

8-1 All new development within the City Limits should be connected to City sewer.

8-2 The city is the primary provider of sewage collection and treatment services for the City's service area under Statewide Planning Goal 11.

8-3 To reduce the reliance on individual sewage disposal systems within the Urban Growth Boundary the city will work with unsewered neighborhoods to find solutions for sewer service.

8-4 The city should collect a sufficient amount of revenue to allow the creation of capital project reserves and to replace aging infrastructure in addition to operational needs of the utility.

8-5 Staff should report to Council on an annual basis regarding the status of the Collection System Master Plan, Capital Improvement Projects and capacity issues within the collection system.

8-6 The City will annually update its financial model as part of the review of sewer rates and report to Council on any changes in the 20-year financial outlook and subsequent rate impacts.

8-7 The master plan shall be updated at least every 5 years with official review and adoption by Council.

8-8 The preference of the City is to serve development through gravity conveyance and use of the Water Reclamation Facility.

8-9 If lift stations are required to serve new development, regional pump stations shall be relied upon to the extent practicable versus individual or smaller lift stations.

8-10 These policies will be implemented through the City of Bend Public Improvement Construction Procedure Standards & Specifications.

8-11 The City should look for reasonable opportunities to decommission energy- and maintenance-intensive lift stations as part of new development or other City infrastructure projects.

8-12 The City will consider the conservation and water reuse measures in the Water Management and Conservation Plan in infrastructure planning to reduce overall impacts to the sewer collection and treatment system.

8-13 The City may establish wastewater collection facilities such as sewer interceptor lines, outside of the Bend UGB, to better serve the land inside the UGB.

8-14 The City may allow lands outside the UGB to connect to sewer collection facilities located outside of the UGB in order to mitigate a public health hazard, and in a manner consistent with state administrative rules that implement a statewide planning goal concerning public facilities and services.

Water Facilities and Systems

8-15 The City of Bend is the provider of water service for the City's service area under Statewide Planning Goal 11

8-16 Avion Water Company is the provider of water service for its franchise area under Statewide Planning Goal 11 and pursuant to the franchise agreement between the City and Avion adopted under Ordinance NS 1514, as amended.

8-17 Roats Water Company is the provider of water service for its franchise area under Statewide Planning Goal 11 and pursuant to the franchise agreement between the City and Roats adopted under Ordinance NS 1747.

8-18 Within the urban planning area, public and private water systems shall be consistent with City Standards and Specifications for construction and service capabilities.

8-19 The City shall continue to coordinate with private providers and irrigation districts in matters of water concerns within the Urban Growth Boundary.

8-20 The City shall continue to implement a water conservation program that emphasizes education, enforcement, metering, and other methods to use water efficiently.

8-21 The City may allow water service outside the UGB at rural levels consistent with Goal 11.

Storm Drainage Facilities and Systems

8-22 The City of Bend is the stormwater utility for the city limits and Uurban Ggrowth Bboundary. As the utility, the City ~~shall~~ intends to review its Stormwater Master Plan and Integrated Stormwater Management Plan as needed for compliance with changes in state or federal requirements and at least every five years.

8-23 The City will ~~initiate~~ consider funding options (e.g., System Development Charges, grants, low-interest~~come~~ loans) for stormwater capital projects in accordance with applicable laws.

8-24 The City will consider ~~plan for and create~~ codes and standards to support effective stormwater management in new development, re-development and infill development that supports dense urban form and housing production goals.

8-25 ~~Due to the lack of a defined drainage pattern for most of the urban area, development mustshall,~~ The City will require development, to the extent practicable, to contain and treat storm drainage ~~on-site~~within the boundaries of the development, which may be one property or a group of adjacent properties being developed under a common scheme. ~~-~~In instances where containing storm drainage on the ~~-~~site would be technically infeasible or would not support the planned development pattern, ~~not be safe or practicable,~~ the City will consider regulations that allow a developer ~~may be allowed to~~shall enter into a formal and recorded arrangement with the City or ~~-~~a private party to adequately address the storm drainage off site, such as a regional control. The City may adopt regulations requiring maintenance and access agreements for stormwater facilities, consistent with its permits from DEQ.

8-~~25~~ 26 The use of stormwater disposal systems will ~~shall~~ be coordinated with the Oregon Department of Environmental Quality and Water Resources Department to protect ground water and surface water.

8-~~26~~ 27 The City will~~shall~~ work to minimize the discharge of untreated stormwater run-off from streets directly into the Deschutes River and Tumalo Creek.

8-~~27~~ 28 ~~All public and private stormwater facilities shall be designed and operated~~The City will regulate stormwater facilities in accordance with the City's Stormwater Master Plan and will~~shall~~ meet appropriate drainage quantity and quality requirements, including, but not limited to, the requirements of the City's National Pollutant Discharge Elimination System (NPDES) MS4 Stormwater Permit,

Integrated Stormwater Management Plan, WPCF UIC Permit and any applicable Total Maximum Daily Load requirements (TDML) requirements. ~~Underground injection and surface discharges to the Deschutes River or Tumalo Creek shall only be approved when other alternatives, such as retention basins or bioinfiltration swales, are not reasonably available. Low impact site designs shall be a required part of all new development and redevelopment projects~~.

8-~~28~~ 29 The ability to provide stormwater facilities for developments proposed for annexation into the City will continue~~shall~~ to be a consideration for annexation approval.

8-~~29~~ 30 The City will~~shall~~ reduce the quantity of runoff and discharge of pollutants to the maximum extent practicable by integrating stormwater runoff controls into new development, ~~and~~ redevelopment, ~~land use decisions~~and infill development. The City may adopt and enforce regulations requiring ~~C~~controls ~~may be required~~ to minimize illicit discharges or pollutants of concern.

8-~~30~~ 31 The City will continue to~~shall~~ implement and enforce requirements for an erosion and sediment control program for public and private construction and post-construction activities.

~~**8-31** All developments shall evaluate the potential of a land parcel to detain excess stormwater runoff and require incorporation of appropriate controls, for example through the use of detention facilities to address quantity, flow, and quality concerns.~~

8-32 The City will ~~shall~~ seek efficiencies and consistency by working with other municipalities and stakeholders within Central Oregon on land use issues to address flood control, watershed health and stormwater pollution prevention.

8-33 The City will consider regulations on development to mitigate impacts of development on flood zones, groundwater, drinking water protection areas, and riparian corridors and natural drainageways.~~continue to Hazard and resource areas with the following characteristics shall be considered unsuitable for urban development:~~

~~flood zones;~~
~~water supply watersheds; and~~
~~riparian corridors and natural drainageways.~~

8-34 The City will consider regulations for~~on~~ ~~D~~development on slopes in excess of 10 percent ~~will shall require special consideration~~ to mitigate impacts to changes in drainageways and stormwater runoff from such development~~prevent construction-related and post-construction erosion~~.

~~8-35~~ ~~The City shall regulate development near water courses to reduce erosion and pollution and to provide open, natural areas.~~

8-~~36~~ 35 ~~Land uses that pose a major threat to water quality, including commercial and industrial uses.~~ such as automobile dismantlers, ~~waste transfer disposal facilities, light industries, and other uses that have a significant potential for pollution, shall not be located within the vicinity of stream, percolation facilities, reservoirs, drill holes or where pollutants could easily come in contact with flood waters, high groundwater, flowing rivers, or reservoirs. Such uses shall be required to reduce any threat of pollution to an insignificant level as a condition of approval.~~ The City will require development types that have the potential for contributing pollutants that pose a risk to water quality, including commercial and industrial uses, to implement and maintain best management practices consistent with the City's stormwater permits.

~~8-37~~ ~~As part of site approval, or as a condition on tentative maps, as necessary, the City shall require permanent stormwater pollution control site design or treatment measures or systems and an ongoing method of maintenance over the life of the project.~~

~~8-38~~ ~~The City shall minimize particulate matter pollution through controls over new and redevelopment (including erosion and sediment controls on grading, quarrying, vegetation removal, construction, and demolition), industrial processes, parking lots and other activities that pose a threat to water quality.~~

Note: Covered in other policies.

~~8-39~~ ~~The City shall require the following stormwater protection measures for all new development and redevelopment proposals during the planning, project review, and permitting processes:~~

- ~~Submit geotechnical site assessments when dry wells or other infiltration or injection systems are proposed.~~
- ~~Avoid conversion of areas particularly susceptible to erosion and sediment loss (e.g., steep slopes) or establish development guidance that identifies these areas and protects them from erosion and sediment loss.~~
- ~~Retain natural drainage channels in their natural state to prevent undue erosion of banks or beds, and preserve or restore areas that provide water~~
- ~~quality or quantity benefits and/or are necessary to maintain riparian and aquatic biota.~~
- ~~Promote site development that limits impacts on, and protects the natural integrity of topography, drainage systems, and water bodies.~~
- ~~Promote integration of stormwater quality protection into construction and post-construction activities at all~~

development and redevelopment sites.

Note: covered in other policies.

8-40 The City shall will work to reduce transportation-related sources of water pollution, particularly in stormwater pollution. Any means and and will take actions that result in a reduction in vehicle-miles-traveled would benefitand reduce congestion and reduce both air and water pollution.

Note: Covered in policy 7-63 in Chapter 7, Transportation.

8-3641 The City shall recognizes and publicize the relationships between transportation, air pollution, and water pollution in the deposition of airborne and other contaminants, including metals and fine particulate matter onto streets and other surfaces, and will consider regulations to minimize or mitigate such pollution.

8-3742 To minimize illicit discharge to stormwater and groundwater from septic systems, the City shall will require lots with onsite sewage disposal to connect to the city sanitary sewer whenever state rules governing connection are met.

8-38 The City recognizes that climate change will likely increase the intensity and frequency of stormwater events, and will consider the likely impacts of climate change in its stormwater regulations.

Solid Waste Disposal

8-4339 The city and county shall encourage recycling beyond the level required by state law as an alternative to landfill disposal.

8-4044 The county shall reduce dust and blowing refuse at the landfills in order to ensure as few adverse impacts as possible from these facilities.

8-4145 The city shall explore methods, including mandatory garbage service, to gain 100 percent disposal of waste at designated landfill sites and discourage the dumping of wastes on public and private lands.

8-4246 The City shall coordinate with Deschutes County on the creation of a new solid waste management plan.

Public Buildings and Facilities

8-4347 Public buildings and facilities shall be located so as to provide convenient public use and to provide maximum service for the greatest economy. Governmental offices should locate downtown when practicable. Other governmental facilities, reservoirs, landfills and correctional facilities should be located in areas with good

public access to principal streets.

8-~~48~~44 The County Public Works facility shall be planned and zoned with a Public Facilities designation. The uses allowed at the site from among those uses listed in a Public Facility zone shall be limited to public works and transportation facilities and yards and public service uses in existing facilities as such facilities may be expanded and accessory uses thereto. Commercial or manufacturing uses shall not be allowed at this site.

General Policies

8-~~49~~45 The City may consider funding mechanisms and agreements to address on-site and off-site improvements, modernization of existing infrastructure to City's standards and specifications, and impacts to infrastructure inside the current City limits.
